

UNIVERSITY OF MYSORE
YUVARAJA'S COLLEGE, MYSORE
(A Constituent Autonomous College with Potential for Excellence)
(Accredited "A" Grade with CGPA 3.34 by NAAC)
JLB Road, Mysuru 570 005, Karnataka , INDIA

Under graduate (Bachelor) Programs offered in Yuvaraja's College (Autonomous):2017-18

1. Bachelor of Science (B.Sc.)
2. Bachelor of Computer Applications (BCA)
3. Bachelor of Business Administration (B.B.A.)

The objectives and outcomes of the above Programs have been set since the CBCS syllabus is during introduced the year of introduction.

Sl. No	Program	Program Code	No of Program specific disciplines	Program Specific code	Page No. PSO & CO
1. Program (B.Sc.)					
1.	B.Sc.	BSCYCM	<u>Core Disciplines: Any three opted (Fourteen):</u>		
	B.Sc.	BSCYCM	1.Biochemistry	BSCBICYCM	05-10
	B.Sc.	BSCYCM	2. Biotechnology	BSCBITYCM	10-15
	B.Sc.	BSCYCM	3.Botany	BSCBOTYCM	16-18
	B.Sc.	BSCYCM	4.Chemistry	BSCCHEYCM	19-26

	B.Sc.	BSCYCM	French	BSCFREYCM	97
	B.Sc.	BSCYCM	Arabic	BSCARAYCM	97
Compulsory Courses					
	B.Sc.	BSCYCM	Environmental Studies	BSCICNYCM	98
	B.Sc.	BSCYCM	Indian Constitution	BSCSTYCM	98
	B.Sc.	BSCYCM	Computer Application	BSCDIMYCM	99
2 and 3: Programs : B.C.A. and B.B.A.					
2.	B.C.A	BCAYCM	Bachelor of Computer Applications	BCACOAYCM	99-113
3.	B.B.A	BBAYCM	Bachelor of Business Administration	BBAMANYCM	113-124

1.

1. Program: Bachelor of Science (B.Sc.)

Program Code: BSCCBCSYCM

Program objectives: (PO):

Objectives all Bachelor of Science degree program is

1. To train critical thinking.
 - a. To develop effective communication
 - b. To train good social interaction.
 - c. To become effective citizenship.
 - d. To have environmental concerns.
 - e. To motivate them for self-directed and lifelong learning process.
 - f. To develop belongingness to our locality and nation.

Program outcome (PO):

Students of all B.Sc. degree Programs at the time of graduation will be able to develop.

1. Critical Thinking: Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions, (intellectual, organizational, and personal) from different perspectives.

2. Effective Communication: Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

3. Social Interaction: Elicit views of others, mediate, disagreements and help reach conclusions in group settings.

4. Effective Citizenship: Demonstrate empathetic social concern and equity centered national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

5. Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

6. Self Directed learning: The ability to engage in independent and life-long learning in the context of socio-technological changes which gives them self-directed and lifelong learning capabilities.

7. Belongingness: The importance of locally available resources and knowledge with pride and this helps them to think locally and act globally and have belongingness to our nation.

1. Program: Bachelor of Computer Applications (BCA)

Program Code: BCACBCSYCM

Program Objectives (PO):

1. To provide a foundation of computing principles and business practices for effectively using/managing information systems and enterprise software.
2. To provide the students with options to specialize in legacy application software, system software or mobile applications.

Program Outcome (PO): Students will able to

- 1) Recognize and appreciate the role of computing in a wide variety of activities such as applications of Modern society, including commerce, education and communication.
- 2) Analyse a given problem and develop an algorithm to solve the problem.
- 3) Demonstrate the basic technicalities of creating word document, creating power point presentation, design spreadsheet for office use.
- 4) Develop the software projects by understanding the client requirement.
- 5) Define fundamental account concept, conventions & terminologies.
- 6) Implement the software models in various programming languages like C, C++, VB. Net, Java Construct in the right way.
- 7) Master the basic concept and understand the database management system.
- 8) Acquire options to pursue MCA/ M.Sc.-CS/IT/ MBA/ MS (IT).
- 9) Become a responsible citizen with sensitivity towards environmental concerns.

3. Program: Bachelor of Business Administration (BBA)

Program Code: BBACBCSYCM

Program Objectives:

1. To Understand of Business Functions
2. To Provide Global Perspectives
3. To Develop Critical and Analytical Thinking Abilities
4. To Develop Interpersonal Skill
5. To Create Social Sensitivity in understanding CSR
6. Demonstrate sensitivity to social, ethical and sustainability issues
7. To Develop Entrepreneurship Insight
8. To prepare students for managerial positions in business and industry.
9. To develop entrepreneurial skills
10. To develop critical thinking and analysing skills
11. To inculcate ethical values, corporate social responsibilities and sustainable business practices.
12. To provide an environment that facilitates all-round development of the student's personality
13. To foster thinking minds that are sensitive to societal needs and issues thus making them good human beings and responsible members of the society.
14. To understand the problems faced by the business sector in the Current scenario.

Program Outcome:

1. Acquiring Conceptual Clarity on Various Functional Areas
2. Demonstrating ability to evolve strategies for organizational benefits
3. Develop analytical ability for Decision Making
4. Demonstrate the ability to develop models / frameworks to reflect critically on specific business contexts
5. Demonstrate capability in Oral and Written Communication
6. Demonstrate Ability to work in Groups
7. Demonstrate capability in understanding social cues for decision making
8. Develop ethical practices and values for Better Corporate Governance.

Sl No.	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	1. Biochemistry , BSCCBCSBICYCM

B.Sc., Biochemistry

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Bioorganic and Biomolecules-I Practical: Volumetric Estimations
2	II	DSC-II	Biomolecules-II Practical: Carbohydrates and Lipids Extraction And Preparation
3	III	DSC-III	Biochemical Techniques and Enzymology Practical: Proteins Biochemical Techniques and Enzyme Assay
4	IV	DSC-IV	Metabolism-I Practical: Colorimetric Estimations
5	V	DSE-IA	Metabolism–II and Human Physiology Practical: Enzyme Assays
		DSE-IB	Molecular Biology Practical: Biochemical and Biophysical Experiments
6	VI	DSE-2A	Nutrition Practical: Nutrition
		DSE-2B	Clinical Biochemistry and Immunology Practical: Clinical Biochemistry and Immunology

DSC: Discipline Specific Core

DSE: Discipline Specific Elective

Program Specific Objectives:

- Adopt strong foundation with skills, relevant training and education towards understanding Biochemistry.
- Apply appropriate tools and techniques for conducting scientific investigations to solve the problems in life science domain.
- Acquire higher degree of work in academics and research.
- Adapt lifelong learning with continuous improvement.

Program Specific Outcome:

- Ability to analyze the various biological components through analytical tools in living cells and molecular machinery.
- Development of practical laboratory skills and strong speculative foundation in the discipline of Biochemistry.
- Understanding of the applications of Biochemistry in various fields such as Clinical Biochemistry, Genetic Engineering, Molecular biology & Biotechnology.
- Acquire practical skills that will prepare for a future career in the interdisciplinary subjects.

- Comprehending fundamental concepts in modern biology to meet the emerging trends, Handling microbial and biochemical systems, Procuring hands on real time experience in the industries.

I Semester

Bioorganic and Biomolecules-I

Course objectives:

- To study the fundamentals of the chemistry, since basic chemistry knowledge is essential for biochemistry subject.
- To study the basics of bioorganic aspects.
- To study the chemistry, occurrence, types and biological role of carbohydrates.

Course outcome:

- To study the biomolecules, which are the pillars of the biochemistry
- To understand the bioorganic components such as reaction intermediates, attacking reagents and stereochemical aspects. They can describe chemistry of vitamins, heterocyclic compounds, terpenes, alkaloids, steroids, flavanoids, hydroxy acids, dicarboxylic acids and keto acids.
- To understand the definitions, classification, chemical reactions, occurrence and functions of carbohydrates that includes monosaccharides, disaccharides, polysaccharides and other carbohydrate derivatives.
- To understand the Chemical basis of the qualitative tests for the carbohydrates.

II Semester

Biomolecules-II

Course objectives:

- To study the biomolecules, which are the pillars of the biochemistry.
- To study the chemistry, occurrence, types and biological role of carbohydrates, proteins, lipids, nucleic acids.

- To understand the definitions, classification, chemical reactions, occurrence and functions of carbohydrates that includes monosaccharides, disaccharides, polysaccharides and other carbohydrate derivatives.
- To understand the definitions, classification, chemical reactions, occurrence and functions of lipids and their derivatives.
- To understand the methods involved in the isolation of proteins, their types and functions. Structure of amino acids and color reactions and the role of biologically important peptides,
- To understand the isolation methods of nucleic acids, their structure, types and functions.

III Semester

Biochemical Techniques and Enzymology

Course objectives:

- To study the structure, classification, nature, types, biological role and applications of enzymes.
- To study the biophysical techniques which allow to learn different methods of isolation and purifications of molecules

Course outcome:

- To understand the biophysical techniques which allow to learn different methods of isolation and purifications of molecules.
- To understand the definitions, classification, nature, types, biological role and applications of enzymes.

IV Semester

Metabolism-I

Course objectives:

- To understand the basic aspects of metabolic pathways and regulation of biomolecules.
- To study and understand the structural and functional aspects of mitochondrial electron transport chain in detail.
- To gain deeper insights on photosynthesis and its associated process.

- Students will acquire the concept of anabolism, catabolism, anapleurotic reactions, redox balance etc. and the role of high energy compounds in the cell.
- They will acquire knowledge related to regulation of various pathways.
- The role of lipids as storage molecules and structural component of bio membranes will be understood in detail.
- Students will learn about importance of high energy compounds, electron transport chain, synthesis of ATP under aerobic and anaerobic conditions will be understood.
- Students will gain knowledge about the fundament aspects of photosynthesis and its associated processes in depth.

V Semester

Metabolism–II and Human Physiology

Course objectives:

- To study about the importance of, nitrogen containing compounds, porphyrins, and steroid hormones.
- To study and appreciate the integrated approach of interrelated pathways of catabolism and anabolism.
- To emphasizes on metabolic disorders at molecular level.
- To learn the regulatory aspects of metabolism for better understanding of physiology and therapeutic applications.

Course outcome:

- Students will learn about the importance of nitrogen and nitrogen containing compounds in biological system.
- Students will learn to explain/describe the synthesis, degradation and functional aspects of amino acids, nucleic acids, steroid hormones and vitamins in detail.
- Students will learn about the regulatory aspects of metabolic pathways at various phases like transcriptional, translational, and post-translational levels.

Molecular biology

Course objectives:

- To give deeper knowledge on cellular processes that drive biological systems.
- To build the fundamental concepts of cellular structural organization and functional understanding of sub-cellular components.

Course outcome:

- Students will obtain understanding of the molecular aspects of biology.
- It also helps in understanding the concepts of cellular function.

- Students obtain fundamental knowledge required for understanding the cancer/apoptosis at molecular level.
- The course addresses molecular mechanisms underlying several central themes in cellular biology like cell division and replication, the transport of proteins and other macromolecules within cells.
- Students of this course will obtain an elementary introduction to the study of molecular biology

V Semester

Nutrition

Course objectives:

- To understand the role of nutrition in health.
- To understand about the physiological and biochemical aspects of the nutrition.
- To plan the therapeutic diet and monitor the evaluation of nutrition therapy according to the disease conditions.

Course outcome:

- Students will learn about the fundamentals of nutrition from the angle of clinical perspective.
- They will understand the concepts like glycemic index, balanced diet, micronutrient deficiencies and their remedies, nutraceuticals and their importance, junk foods and their hazards in the holistic manner.
- The course will assist the students to gain employability in diagnostic and research institutes.

Clinical Biochemistry and Immunology

Course objectives:

- To understand the concept of health & diseases, communicable, non-communicable diseases. Metabolic diseases & deficiency.
- To give knowledge on various bio-molecules and their use in diagnosis and treatment of diseases.
- To create awareness of different lifestyle diseases including its management.
- To give insights to the recent developments in clinical diagnosis.
- To gain knowledge of the development of the various cells and tissues of the human immune system.
- To model the physiological and pathological functions of the immune system at a molecular level.

- To demonstrate some of the major modern techniques influenced by immunology and to understand types of immune responses seen in the body in normal and pathological conditions.
- To acquire knowledge about research and development of novel vaccines and immune therapeutics.

Course outcome:

- It illustrates the mechanism of metabolic disorders at molecular level.
- Students will learn about the normal constituents of urine, blood and their significance in maintaining good health.
- Students will get the knowledge of marker enzymes useful in diagnosis of various diseases.
- It is directed towards the employability in diagnostic centers.
- Students will have knowledge of different types of immunity, protection barriers, different cells which are participating in the immune responses. Applications of monoclonal antibodies. Immunology of cancer and other disorder.
- Students will understand the importance of ongoing research like production of vaccines for emerging pathogens, also in immunotherapy, autoimmune diseases.
- This will help the students in advancing understanding of basic immunology which is essential for clinical and commercial application and will facilitate the discovery of new diagnostics and treatments to manage a wide array of diseases.
- Students will understand the role of immune responses in numerous disciplines of medicine, particularly in the field of organ transplantation, oncology etc.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	2. Biotechnology , BSCCBCSBITYCM

Program Specific objectives:

- Biotechnology is an undergraduate course aims to impart knowledge to the students on application of biotechnology in various fields such as medical, environmental, industrial, agricultural and many more.
- The main motto is to create biotechnological awareness.
- To encourage students a critical appreciation of the integrated nature of biotechnological problems.
- To make them realise that the biotechnological problems are global.
- To induce the spirit of competitiveness.

- To impart specialised knowledge and skills to students in particular areas of the national or regional biotechnological issues.

Programme Specific Outcome:

After successful completion of B.Sc. Biotechnology Course:

- Graduates in biotechnology will be eligible for pursuing higher education, M.Sc. programs in Biotechnology and also in the different field of life science.
- Graduates will exhibit contemporary knowledge in Biotechnology and students will be eligible for doing jobs in pharmaceutical and biotechnological Industry.
- Graduates will be able to understand the potentials, and impact of biotechnological innovations on environment and their implementation for finding sustainable solution to issues pertaining to environment, health sector, agriculture, etc.
- Graduates will be able to design, conduct experiments, analyze and interpret data for investigating problems in BT and allied fields.
- Graduates will be able to work individually as well as in team to survive in multidisciplinary environment.
- Graduates will possess oral and written communication skills.

B.Sc., Biotechnology

SI No	Sem	Course	Title of the Paper
1	I	DSC-I	Biomolecules & Microbiology
2	II	DSC-II	Enzymology & Cellular Metabolism
3	III	DSC-III	Cell biology, Genetics
4	IV	DSC-IV	Plant Tissue & Animal Cell Culture
5	V	DSE-IA	Molecular Biology & Genetic Engineering
		DSE-IB	Immunology & Medical Biotechnology
6	VI	DSE-2A	Agricultural, Environmental & Industrial Biotechnology
		DSE-2B	Bioanalytical Tools & Bioinformatics

DSC: Discipline Specific Core

DSE: Discipline Specific Elective

I Semester

Biomolecules and Microbiology

Course objectives:

- To understand the basics of biotechnology through biomolecules and microbiology.
- Highlights the structure and importance of various biomolecules in living organisms.
- Study on different microorganisms, their identification techniques and diseases caused by them

Course outcome: On completion of the courses students will be able:

- To gain knowledge about structure and function of biomolecules in living organisms.
- To gain knowledge on principle and application of various types of Microscopy.
- To classify and explain the structure and general characteristics of Microorganisms.

II Semester

Enzymology and Cellular Metabolism

Course objectives:

- Basic understanding of enzymes, their classification and functional aspects.
- Basic understanding of metabolism, different metabolic processes at cellular level, metabolism of biomolecules and metabolic disorders, and Bioenergetics,
- It explores the knowledge of interconnections among all the biomolecules and their metabolism at cellular level.
- To understand the structure and functions of enzymes, their role in metabolism and metabolic disorders.

Course outcome:

- Students will acquire new knowledge of the interdependence between enzymes, bioenergetics and metabolism that is vital for normal metabolic activities, in maintaining normal health and in metabolic disorders and diseased conditions
- They understand the role of enzymes to maintain normal functions in the body, that ensures the survival of human being, and also different living organisms.
- They will learn how enzymes play vital role in normal metabolic activities, diseased conditions/metabolic disorders. Generation of energy via ETC and their utilization for synthesis of ATP which have important role to play in various metabolic processes of the body.

III Semester

Cell Biology, Genetics

Course objectives:

- The focus is on interactions between the cell biology, genetic constitution of an organism and various immunological aspects of living organisms.
- To understand the basic unit of the organism.
- To differentiate the organisms by its cell structure.
- To know Components of the Cell and their division.
- To explain the arrangement of Genes and their interaction.
- To describe the influence of environment on gene expression.
- To understand extra nuclear inheritance, linkage & crossing over.
- It deals with the interactive cellular processes, genetic makeup, and role of various immunologically active organs and cells in the immune system.
- Immune system is a very important part in the protection of body against deleterious effects caused by various harmful microorganisms.

Course outcome:

- Cell is an important and integral part of living organisms. Genetic constitution of of an organism plays a key role in normal development of an organism. Immune system plays a vital role in protection of organism.
- Students gain knowledge about how these relationships are important in maintaining normal life, and also in various metabolic disorders and diseases.
- They also strive to understand the functions of cell, variations in gene, chromosome and abnormal functions due to variations in chromosomes.
- Exploring more about functions of cell, importance of genetic constitution of an organism and functions of immune system.

IV Semester

Plant Tissue & Animal Cell Culture

Course objectives:

- The paper aims to build a conceptual understanding of students by exposing them to the basic principles behind various processes of plant tissue culture and animal cell culture.
- Plant & Animal biotechnology is the study of the history and development of plant tissue culture various biotechnological processes such as applications of plant tissue culture, Transgenic plants and Animal biotechnology discusses the historical background, a brief account of importance and development of animal cell culture, cloning techniques, and transgenic animals.
- It gives a clear knowledge on the plant tissue culture, animal cell culture, gene cloning, production of transgenic plants and animals, and their advantages. Course outcome:

- This paper enables students to learn various methods and procedures of plant tissue culture and animal cell culture.
- Students gain knowledge about gene cloning techniques
- Students will be able to gain the knowledge on the production of transgenic plants and animals.
- Advantages of transgenic plants and animals.

V Semester

Molecular Biology & Genetic Engineering

Course objectives:

- To understand from cells to organelles to molecules, the understanding of various biological processes.
- To explain genome organization in higher organisms.
- To describe kinetic classes of DNA and Gene families.
- To understand the steps involved in recombinant DNA technology.
- To explain the construction of DNA & c DNA library and their applications
- Mutations, proto-oncogenes, oncogenes and tumour suppressor genes, physical, chemical and biological mutagens; types of mutations; intra-genic and inter-genic suppression.

Course outcome:

- Student should be equipped to understand three fundamental aspects in biological phenomenon: a) what to seek; b) how to seek; c) why to seek?
- Students gain basic knowledge about Molecular biology, genetic engineering.
- Students get a valuable knowledge about the theoretical knowledge of various technologies relating to molecular biology and genetic engineering.
- In conjunction with the practicals the students will be able to take up minor biological research as well as placement in the relevant biotech industries.

Immunology & Medical Biotechnology

Course objectives:

To make the students to understand mechanisms of various immunological processes of the body

To make them understand the concept of application of immunology

Medical biotechnology is aimed at making the students understand the pharmaceutical applications of biochemistry and living systems

Course outcome:

Students will be able to understand various antigen and antibody reactions to fight against the diseases

Concept of application of immunology helps them to develop the knowledge about the vaccine development

Various applications of living system will motivate students to take up a career in this field

V Semester

Agricultural, Environmental & Industrial Biotechnology

Course objectives:

To make them understand the use of plants in the application field especially in agriculture

To make them understand the protection of environment through biological applications

To develop the concept of use of various living organisms to obtain industrial products which can have medicinal, agricultural or environmental protections applications

Course outcome:

Students will come to know, how to produce various biofertilizers, biopesticides and genetically engineered plants

Students will develop environmental friendly approaches through biological applications

Students will come to know how living organisms can be used to obtain industrial products which can have medicinal, agricultural or environmental protections applications

Bioanalytical Tools & Bioinformatics

Course objectives:

This is aimed to impart knowledge on the instrumentation required for bioanalysis

To make the students develop computational biology knowledge where use of software in solving biological problems is the goal.

Course outcome:

The knowledge obtained on the instrumentation required for bioanalysis will help them in entering diagnostic labs and Institutes with Good Laboratory Practices (GLPs)

Students will get knowledge on advanced field of biology such as computational biology where use of software in solving biological problems is understood and this help them in their Research career and also in Biotech industry if they want to take up profession in that area.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	3. Botany , BSCCBCSBOTYCM

Program specific objectives:

- To bring awareness of plant wealth around us which has to be protected with utmost care
- To make them understand the diversity of plant kingdom
- To make them understand morphology, anatomy, cell biology, microbiology related to plants, physiology, molecular biology genetics, plant propagation, plant breeding evolution of plants
- To train them to enter into higher studies, teaching, research, and industry related profession in botanical science.
- To prepare them to competitive examinations like KPSC, UPSC and IFS etc

Program specific outcome:

- Student will become the torch bearers of conservation of plant wealth
- They will become competent in naming the common plants around them which the general public usually will be interested.
- In-depth study of plant science sub disciplines help them to enter into the institutes which require specific skill sets
- Many students enter into B.Ed programs which generates many good teachers
- Students after completion of the course get opportunities for higher studies in plant science in India and abroad or job opportunities related to plant science as well as in general service fields.

B.Sc., Botany – 2017-18

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Microbial diversity, Phycology, Mycology, Lichens
2	II	DSC-II	Bryology Pteridology, Gymnosperms and Paleobotany
3	III	DSC-III	Plant Anatomy, Embryology and Plant Ecology
4	IV	DSC-IV	Plant Physiology and Metabolism
5	V	DSE-IA	Taxonomy, Economic Botany and Ethno botany
		DSE-IB	Cell Biology, molecular biology and plant breeding
6	VI	DSE-2A	Plant Physiology and evolution
		DSE-2B	Genetics, Genetic Engineering Ecology and Phytogeography

DSC: Discipline Specific Core

I Semester

Microbial diversity, Phycology, Mycology, Lichens

Course outcome:

1. To understand the General characters, Classification and Economic importance of Mollicutes, Viruses, Bacteria, Cyanobacteria, Algae, Fungi, Lichens
2. To Learn the Structure and Reproduction of various forms included in the syllabus
3. To acquire the basic knowledge of various plant diseases mentioned in the syllabus and their management

II Semester

Bryology Pteridology, Gymnosperms and Paleobotany

Course outcome:

1. To understand the Salient features, Classification and Economic importance of Bryophytes, Pteridophytes and Gymnosperms
2. To study the Morphology, Anatomy and Reproduction of Pteridophytes and Gymnosperms included in the syllabus
3. To acquire the knowledge of Geological time scale, Fossils and Fossilization

III Semester

Plant Anatomy, Embryology and Plant Ecology

Course outcome:

1. To study the development and structure of Male and Female Gametophyte, Embryo, Endosperms in Angiosperms
2. To acquire the knowledge of Experimental Embryology
3. To acquire the basic knowledge of Plant community and their adaptations
4. To study the environmental factors and their impact on Plant community
5. To acquire the knowledge of various Ecosystem and energy flow

IV Semester

Plant Physiology and Metabolism

Course outcome:

1. To understand the underlying principles of various physiological processes and metabolism in plants
2. To study the roles of minerals in plant metabolism
3. To study plant growth and development

IV Semester

Taxonomy, Economic Botany And Ethnobotany & Cell Biology, Molecular Biology and plant breeding (VI)

Course outcome:

1. To study the types of classification- Artificial, Natural, Phylogenetic and Recent trends in Taxonomy
2. To acquire the knowledge about Botanical Survey of India (BSI), Herbarium,
3. Brief study of the Economic products of Angiosperms and Ethnobotany

4. To acquire the knowledge on chemistry, structure, types of genetic material and protein synthesis
5. To learn the concepts of gene and mechanism of gene regulation
6. To acquire the knowledge on principles, techniques and applications of Plant Biotechnology
7. To understand methods of gene transfer in Recombinant DNA technology
8. Applications of Biotechnology in Human welfare, IPR, Biosafety and Bioethics
9. To understand the principles, tools and techniques of Genetic Engineering
10. To learn the principles, techniques and applications of Plant Breeding
11. To acquire the knowledge of theories and evidences of evolution

IV Semester

Plant Physiology and evolution &

Genetics, Genetic Engineering Ecology and Phytogeography

Course outcome:

1. To understand the underlying principles of various physiological processes and metabolism in plants
2. To study the roles of minerals in plant metabolism
3. To study plant growth and development.
4. To acquire the knowledge of Biodiversity, conservation and biolegislantions
5. To study the geographical distribution of plants
6. To understand Mendel's principles, deviations from Mendelism, Mutation and its significance
7. To acquire the knowledge of principles, techniques and applications of Plant Biotechnology.
8. To understand methods of gene transfer in Recombinant DNA technology
9. Applications of Biotechnology in Human welfare, IPR, Biosafety and Bioethics
10. To understand the principles, tools and techniques of Genetic Engineering.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCYCM	4. Chemistry , BSCBICYCM

B.Sc - Chemistry

Sl. No	Sem	Title of the Paper
1	I	Chemistry paper-1
2	II	Chemistry paper-II
3	III	Chemistry paper-III
4	IV	Chemistry paper-1 V
5	V	Chemistry paper-V
6		Chemistry paper-VI
7		Chemistry paper-VII
8	VI	Chemistry paper-VIII
9		Chemistry paper-IX
10		Chemistry paper-X

Program Specific Course Outcome:

1. Students will get a good background of Chemistry knowledge in all sphere of life.
2. Students will get good knowledge of General chemistry, Inorganic chemistry, Organic Chemistry, Physical chemistry and Analytical chemistry.
3. The above knowledge enables the students to enter to Post graduate courses in Chemistry, Organic Chemistry, Industrial Chemistry & interdisciplinary areas etc.
4. Helps the students to enter research institutes to do their Integrated Ph.D programs.
5. They get knowledge of chemicals and medicinal composition and this helps them to get placements in Industry and research institutes also.
6. They will get a range of practical skills so that they can understand and assess risks and work safely measures to be followed in the laboratory.
7. Students will gain the ability to apply standard methodology to the solution of problems in chemistry.
8. Students will get the ability to plan and carryout experiments independently and assess the significance of outcomes and to cater to the demands of chemical Industries of well-trained graduates.
9. Students will get the ability to adapt and apply methodology to the solution of unfamiliar types of problems.
10. To develop an independent and responsible work ethics.

I SEMESTER
CHEMISTRY– PAPER – I

Course Objectives:

- To understand the atomic theory of matter, composition of atom.
- Learning scientific theory of atoms, concept of wave function.
- To learn Periodic Properties of elements
- To learn basic reactive intermediates and reactions in organic compounds
- To know about the Maxwell distribution, mean-free path, kinetic energies.
- To know about the surface phenomenon like adsorption and catalysis.

Course Outcome:

- Students will understand the electronic configuration of various elements in periodic table
- Students will get the idea of de Broglie matter of radiation
- Students will understand the physical and chemical characteristics of elements in various groups and periods according to ionic size, charge, etc. and position in periodic table.
- Students will understand the basic of organic molecules, structure, bonding, reactivity and reaction mechanisms.
- Students will acquire the knowledge of behaviour of real gases, deviation from ideal behaviour, equation of state, isotherm, and law of corresponding states
- Students will know about the mechanism of catalysis, Michaelis-Menten equation, various adsorption process and adsorption isotherms.

PRACTICAL PAPER – I

Course Objectives:

- To learn about concept of Normality, Molarity, Molality etc.,
- To understand the concept of good lab practices, understanding the chemical nature and awareness of MSDS
- To carry out the preparation of standard solutions, dilution of solutions, calibrations, standardization and estimations.

Course Outcome:

- Students will learn about titrimetric analysis, redox reactions and Acid-Base Titrations
- Students will be able to get idea about Calibration and use of apparatus.

II SEMESTER
CHEMISTRY– PAPER – II

Course Objectives:

- To study and understand about bonding between ions, molecules and polarity of molecules.
- To understand the basic idea of alcohols, phenols and their reactions.
- To understand the synthetic applications of organometallic compounds.
- To study the concept of Colligative properties and electrolytes.

Course Outcome:

- At the end Students will get idea about bonding in molecules and ions.
- Students will learn the concept of Colligative properties and their applications.
- Students will able to learn the types of alcohols, properties of Phenols, amines.

PRACTICAL PAPER – II**Course Objectives:**

- Students will be able to get the evidence based comparative chemistry to explain the chemical synthesis and identification of organic compounds by qualitative approach.

Course Outcome:

- Students will come to know about special elements, functional groups and structure of organic compound.

III SEMESTER**CHEMISTRY PAPER – III****Course Objectives:**

- To know the important properties, bonding and structure of compounds of P-block elements.
- To study the types of inorganic solvents and their properties.
- To understand the basic concept, reactions and mechanisms of Carbonyl compounds and Carboxylic acids
- To know the concepts of oils, fats, waxes, soaps, detergents and dyes
- To learn about basic concepts of thermodynamics and their laws
- To study the types of emulsions, gels, their importance

Course Outcome:

- Student will able to understand the structure, chemical properties and applications of p-block elements.
- Students learn the general characteristics of non-aqueous solvents and chemical properties of acid and bases.
- Students will familiarize with the Carbonyl compounds and Carboxylic acids
- Students will able to understand the importance and applications of thermodynamics, emulsions and gels

PRACTICAL PAPER – III**Course Objectives:**

- To develop the experimental skill by the practice of qualitative analysis of inorganic salts.
- The lab work will have a somewhat inorganic salts focus. E.g. the related to ions and the use of ions in assays.

Course Outcome:

- Students will able to understand the distinction between qualitative and quantitative chemical analysis.
- Students will able to understand the assessment method of analysis related to chemical analysis goals such as detection limits.

IV SEMESTER

CHEMISTRY PAPER – IV

Course Objectives:

- To understand the concept of indicators and use of organic reagents in inorganic analysis.
- To understand the general characteristics of transition and inner-transition elements in the periodic table.
- To understand basics of nuclear chemistry like nuclear reactions and nuclear reactors
- To learn about basic concept of stability and conformation of alicyclic compounds and reactions in Aromatic compounds.
- To understand the third law of thermodynamics, Nernst heat theorem, Vant-hoff's reaction isotherm.
- To acquire basic knowledge about the laws of spectrophotometry, photochemistry and crystallography.

Course Outcome:

- At the end students will be able to know how to choose indicators and organic reagents for various types of titrations and inorganic analysis respectively.
- Students will learn the fundamental concepts in coordination chemistry of transition metals.
- Students will understand the working of nuclear reactors, binding energy and fission energy, stability of nuclei.
- Students will learn the concept of electrophiles, nucleophiles, free radicals, and intermediates along with the reaction pathways.
- Students will learn and understand the importance and applications of Nernst heat law, Vant-hoff's reaction isotherm and the third law of thermodynamics
- Students will get the knowledge about theoretical uses of spectrophotometer and photochemistry.

PRACTICAL PAPER – IV

Course Objectives:

- To determine the physical properties of different organic liquids, molecular weight of nonvolatile solute.
- To determine first, second and zero order rate constant.
- To know the thermometric properties of acid and base by titrimetric method.

Course Outcomes:

- Students familiar about density, viscosity and surface tension of various liquids.
- The students get idea about to determine molecular mass of a non-volatile solute by non-instrumental method.
- The investigation of first, second and zero order reaction will be demonstrated by students.
- The difference between transition temperature and miscibility temperature can be understood by the students

V SEMESTER

CHEMISTRY PAPER – V

Course Objectives:

- To understand the key features of coordination compounds, including: - the naming, types of ligands and physical methods to determine the complex ions.
- To study about the shapes and structures of coordination complexes and types of isomers and metal-ligand bonding in coordination compounds.
- To understand the general characteristics of inner-transition elements in the periodic table.
- To learn about concept and principle of gravimetric analysis.
- To Study and understand and General characteristics Bio-Inorganic Chemistry and essential and traces of elements in biological process.

Course Outcome:

- Students will able to use Valence Band Theory and Crystal Field Theory to understand the magnetic properties of coordination compounds Students will learn the applications and properties of lanthanides and actinides
- Students will learn the different techniques of gravimetric analysis and electro gravimetry
- Able to explain the fundamentals concepts Bio-Inorganic Chemistry

CHEMISTRY PAPER – VI

Course Objectives:

- To know about the various types of drugs and their application in the field of medicine
- To study about classification of carbohydrates and preparation methods

Course Outcome:

- Understanding of uses of antibacterial, antimalarial, anticancer drugs and know the synthesis of common drugs like aspirin, paracetamol and sulpha drug
- Students will be able to classify the carbohydrates, learn the inter conversion reactions of carbohydrates, and also will be able to understand the application of different carbohydrates

CHEMISTRY PAPER – VII

Course Objectives:

- To understand the concepts of kinetics and theories of reaction.
- Study of basic concepts and applications of molecular spectroscopy related with rotational, vibrational, Raman and electronic spectra

Course Outcome:

- Students will able to learn the physical properties of chemical reaction, Nernst distribution law, theories of strong electrolytes
- Students are able to understand basic principle, selection rule for rotational vibrational and Raman spectra.

PRACTICAL PAPER – V

Course Objectives:

- To understand the basic principles and advantages of gravimetric analysis and how it is better than any other methods learnt previously

- To develop the skill in handling the delicate apparatus like crucible and accuracy of weighing
- To learn about filtration and ignition technique in better way
- To study about the ore estimation and alloy estimations.

Course Outcomes:

- Student will understand why gravimetric estimation is superior to other previously learnt volumetric estimation
- Students learn the technique of filtration and ignition
- Student develops skill to handle and weighing small compounds accurately
- Student learn about metal ion concentration in micro quantity which is helpful for industrial process and metallurgical process
- Students understand and know about source, estimation and application of ores.

PRACTICAL PAPER – VI

Course Objectives:

- To separate ortho and para-nitro aniline in a mixture by thin layer and column chromatography.
- To estimate vitamin-C, amino acid, amino group and carboxylic acid by various suitable methods

Course Outcomes:

- Students will able to demonstrate about separation of ortho and para-nitro aniline in a mixture by thin layer and column chromatography.
- Vitamin-C, Amino and carboxylic acid group can be estimated by student by various suitable methods.

PRACTICAL PAPER – VII

Course Objectives:

- To extract metals through metallurgical operations and their uses.
- To learn about the properties and uses of abrasives, propellants, refractories and explosives
- To get to know about the basic concepts of nanotechnology

Course Outcome:

- Students will able to understand the different metallurgical processes involved in the extraction process.
- The students will understand the types of abrasives, refractories, ceramics, paints
- Able to understand the composition of various fuels, their production and calorific value
- Students will be able to understand the new branch of modern science and application of nanotechnology in modern days

VI SEMESTER

CHEMISTRY – PRACTICAL PAPER – VIII

Course Objectives:

- To understand how instrumental methods are better than conventional methods learnt in previous years.
- To develop the accuracy in plotting graph and learn idea about unit conversion.
- To understand some important terms like equivalent conductance, dissociation constant practically.
- To understand how conductometry linked to rate of reaction.

- To understand how different electrodes work, and how they are.
- To understand how Beer's -Lamberts law practically applied for the concentration of metal ion determine in ppm level.

Course Outcomes:

- Students will understand why instrumental estimation is superior to other previously learnt conventional methods.
- Students learn about how conductance depends on size of ion and learn about how redox reaction is occurring by change in potential.
- Students verify Beer's – Lamberts law and helpful in determine estimation of metal ions.
- Students develop the skills of handling the different electrodes.
- Students able to differentiate different type of electrodes.

CHEMISTRY PAPER – IX

Course Objectives:

- To understand the basic introduction about the amino acids and nucleic-acids
- To learn about organic polymers,
- To study some important organic reagents and their applications in synthetic organic chemistry.
- To know about the enantiomers, optical isomerism, racemization, geometrical isomerism in various organic molecules.

Course Outcome:

- After completion of the course, the learner can be able to understand the properties, synthesis and applications of amino acids.
- The learner can be able to understand the mechanism of organic polymer material formation and application of polymers in the field of industries
- Student able to apply the usage to synthetic reagents to synthesis organic compounds in research fields
- Students will be able to understand the stereochemical aspects involved in organic molecules, optical activity, and understand the absolute configurations of organic molecules.

CHEMISTRY PAPER – X

Course Objectives:

- To learn about the concepts of electrochemistry
- To understand pH titration, potentiometric titration and concept of corrosion
- To know about the Gibbs phase rule and its application to one and two component system
- To understand different crystal system and crystal defects

Course Outcomes:

- After completion of the course, the learner can be able to understand the basic principle of laws of electrochemistry, chemical cells and their function.
- Students will able to understand the properties of electrodes, EMF measurement, and potentiometric titrations.
- The students will able to determine the cell constant, Equivalent conductance, degree of dissociation and dissociation constant of a weak acid.
- Conductometric titrations of acids and bases can be understood by the students.

- Able to understand the application of Gibbs rule in different component system
- Students will be able to classify the crystal system and solve numerical problems and also able to understand the defects in crystal system

VI SEMESTER CHEMISTRY– PRACTICAL PAPER – VIII

Course Objectives:

- To study about the ore estimation and alloy estimations
- To understand the solubility and preparation of different ore and alloy solution
- To understand the standardization of solutions
- To know employment of different indicators in the titration process
- To know about alloy estimation by complexometric, iodometric and acid base titration process
- To understand the steps involved in the preparation of inorganic complexes

Course Outcomes:

- Students learn the technique titration and ore solution preparation
- Student develops skill to handle and weighing small compounds accurately
- Student learn about metal ion concentration in micro quantity which is helpful for industrial process and metallurgical process
- Students understand and know about source, estimation and application of ores.
- The learners will learn the steps involved in the preparation of the different inorganic complexes and get to know about the filtration, precipitation , drying and other techniques

B.SC - Computer Science

Sl. No.	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	5. Computer Science , BSCCBCSCOMYCM

Program specific objectives:

- To impart basic knowledge in computer science
- To give the skills required related to computer science
- To make the students aware of the various facets of computer science
- To make the students ready for placements in various software and other companies which need computer science skill sets

Program specific outcome: After completing this program specific discipline the students

- Get basic knowledge of computer science and this helps them to go for higher studies and do better in their profession
- Trained with skills required for their higher studies and jobs
- Students are placed in various software companies and regularly enter to higher studies also.

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Computer Fundamentals and Organization
2	II	DSC-II	Problem Solving In C
3	III	DSC-III	Advanced Programming In C++

10		DSE-6.2	Practical : Project Work
11		DSE-6.3	Software Engineering
12		DSE-6.3	Practical : Project Work

I Semester

Computer Fundamentals and Organization

Course objectives: Students will try to learn:

- Conceptualize the basics of organizational and architectural issues of a digital computer.
- Demonstrate and perform computer arithmetic operations on integer and real numbers.
- Explain the representation of data and information in computer systems

Course outcome: On completion of the course the student should be able to:

- Familiar with parts of computer
- Understand the input and output devices.
- Basic ideas of storage devices, RAM, ROM
- Understand the design of sequential Circuits such as Flip-Flops, Registers, and Counters.
- Obtain a basic level of Digital Electronics knowledge and set the stage to perform The analysis and design of Complex Digital electronic Circuits
- Perform conversions among different number systems, became familiar with basic logicGates and understand Boolean algebra and simplify simple Boolean functions by using basic Boolean properties & design of combinational circuits.

DIGITAL LAB

Course objectives: Students will try to learn:

- Learn the basics of logic gates.
- To understand the basic digital circuits and to verify their operation
- Construct basic combinational circuits and verify their functionalities
- Apply the design procedures to design basic sequential circuits
- Learn about counters
- Learn about Shift registers

Course outcome:

- To explain the concepts and design the Combinational circuits.
- To explain the concepts of flip-flops, registers and counters

II Semester

Problem Solving in C

Course objectives: Students will try to learn:

- To learn problem solving techniques.
- To make the student learn a programming language.
- To develop logics, this will help them to create programs, applications in C.
- Also learn the basic programming constructs they can easily switch over to any other language in future.

Course outcome: Students will be able to:

- Analyze a given problem and develop an algorithm to solve the problem
- Use the 'C' language constructs in the right way
- Design programs involving decision structures, loops and functions.
- Understand the dynamics of memory by the use of pointers and Structures.
- Design, develop and test programs written in 'C'

Problem Solving in C Lab

Course objectives: Students will try to learn

- A programming language.
- Problem solving techniques.
- How to write programs in C and to solve the problems.

Course outcome: Upon successful completion of the course, a student will be able to:

- Demonstrate use of data types, simple operators (expressions)
- Demonstrate decision making statements (if and if-else, nested structures)
- Demonstrate decision making statements (switch case)
- Demonstrate use of simple loops
- Demonstrate use of nested loops
- Demonstrate menu driven programs and use of standard library functions.
- Demonstrate writing c programs in modular way (use of user defined functions)
- Demonstrate recursive functions.
- Demonstrate use of arrays (1-d arrays) and functions
- Demonstrate use of multidimensional array (2-d arrays) and functions
- Demonstrate use of pointers
- Demonstrate concept of strings (strings and pointers)
- Demonstrate array of strings.
- Demonstrate structures (using array and functions)
- Demonstrate nested structures

III Semester

Advance Programming In C++

Course objectives: Students will try to learn:

- To develop programming skills , using object oriented programming concepts,
- learn the concept of class and object using C++
- develop classes for simple applications

Course outcome: On successful completion of the course students will be able to:

- Identify importance of object oriented programming and difference between structured oriented and object oriented programming features.
- Able to make use of objects and classes for developing programs.
- Understand the difference between object oriented programming and procedural oriented language and data types in C++.
- Program using C++ features such as composition of objects, Operator overloading, inheritance, Polymorphism etc.

Advanced Programming in C++ Lab

Course objectives: Students will try to learn:

- Develop solutions for a range of problems using objects and classes.
- Programs to demonstrate the implementation of constructors, destructors and operator overloading.
- Apply fundamental algorithmic problems including type casting, inheritance, and polymorphism.
- Understand generic programming, templates, file handling.

Course outcome: On completion of the course, the student will be able to write:

- Programs using Control Structures
- Programs using Functions
- Programs using Arrays
- Programs using Inline Functions
- Programs using Classes
- Programs using Constructors and Destructors
- Programs using Friend Functions
- Programs using Operator Overloading
- Programs using Inheritance
- Programs using Virtual Functions
- Programs using Files
- Programs using Strings

III Semester

Database and Information System

Course objectives: Students will try to learn:

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language
- To demonstrate the principles behind systematic database design approaches by covering Conceptual design, logical design through normalization

Course outcome: On successful completion of the course, a student will be able to:

- Gain a good understanding of the architecture and functioning of database management

systems as well as associated tools and techniques, principles of data modeling using entity relationship and develop a good database design and normalization techniques to normalize a database.

- Construct an Entity-Relationship (E-R) model from specifications and to transform to relational model
- Construct unary/binary/set/aggregate queries in relational algebra.
- Understand the use of structured query language and its syntax, transactions, database recovery and techniques for query optimization
- Acquire knowledge in fundamentals of Data Base management system
- Analyze the difference between traditional file system and dbms.

Database Management System Lab

Course objectives: Students will try to learn:

- To describe a sound introduction to the discipline of database management systems.
- To introduce the concepts of basic SQL as a universal Database language
- To demonstrate the principles behind systematic database design approaches by covering Conceptual design, logical design through normalization.
- To design forms and reports through Visual Basic.

Course outcome: Students will able to:

- Explain the features of database management systems and Relational database.
- Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
- Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
- Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
- Design the forms and reports through the usage of front end designing tool.

III Semester

Java and Web Programming

Course objectives: Students will try to learn:

- Basic data types and computation, simple I/O, conditional and control structures, string handling and functions.
- To understand the importance of Classes & objects along with constructors, Arrays and Vectors.
- Discuss the principles of inheritance, interface and packages and demonstrate through problem analysis assignments how they relate to the design of methods, abstract classes and interfaces and packages.
- To understand importance of Multi-threading & different exception handling mechanisms.
- To learn experience of designing, implementing, testing, and debugging graphical user interfaces in Java using applet and AWT that respond to different user events.

Course outcome: Students will be able to:

- Implement Object Oriented programming concept using basic syntaxes of control
- Structures, strings and function for developing skills of logic building activity.
- Identify classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem
- Demonstrates how to achieve reusability using inheritance, interfaces and packages and describes faster application development can be achieved.
- Demonstrate understanding and use of different exception handling mechanisms and concept of multithreading for robust faster and efficient application development.
- Identify and describe common abstract user interface components to design GUI in Java using Applet & AWT along with response to events.

Java Lab (Practical –I)

Course objectives: Students will try to learn:

- Gain knowledge about basic Java language syntax and semantics to write Java programs and use concepts such as variables, conditional and iterative execution methods etc.
- Understand the fundamentals of object-oriented programming in Java, including defining classes, objects, invoking methods etc and exception handling mechanisms.
- Understand the principles of inheritance, packages and interfaces.

Course outcome: Students will be able to:

- Identify classes, objects, members of a class and relationships among them needed for a specific problem.
- Write Java application programs using OOP principles and proper program structuring.
- Demonstrate the concepts of polymorphism and inheritance.
- Write Java programs to implement error handling techniques using exception handling.

Software System

Course objectives: Students will try to learn:

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC.
- To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS.
- To study the need for special purpose operating system with the advent of new emerging Technologies.

Course outcome: Students will be able to:

- Distinguish between Operating Systems software and Application Systems software.

- Describe commonly used operating systems.
- Identify the primary functions of an Operating System.

Linux Lab (Practical –II)

Course objectives: Students will try to learn:

- The basic commands of Linux operating system
- To write shell scripts
- To create processes background and fore ground etc..by fork() system calls

Course outcome: Students will able to:

- Understanding the basic set of commands and utilities in Linux systems.
- To learn to develop software for Linux systems.
- To learn the important Linux library functions and system calls.
- To understand the inner workings of UNIX-like operating systems.

Data Mining and Warehousing

Course objectives: Students will try to learn:

- They come to know how to write program in Assembly level language and know how to Implement the Programs in 8085 kit.
- Know the basic concepts 8085 program.
- Get hands on experience with Assembly Language Programming

Course outcome: On successful completion of the course, a student will be able to:

- To write program in Assembly level language and know how to implement the Programs on 8085 kit.
- Know the basic concepts 8085 program.

III Semester

Computer Architecture and Microprocessor

Course objectives: Students will try to learn

- Study various data transfer techniques in digital computer.
- Learn microprocessor architecture and study assembly language programming

Course outcome: On successful completion of the course, a student will be able to:

- Describe basic organization of computer and the architecture of 8085 microprocessor.
- Implement assembly language program for given task for 8085 microprocessor
- Learn about the architecture and programming of the microprocessor 8085 and 8086.
- Know the basic concepts of Motherboard and function of 8085 processor.

Data Communications and Networks

Course objectives: Students will try to learn:

- To understand the basic concepts of data communication, layered model, protocols and

interworking between computer networks and switching components in telecommunication systems.

- Discuss the nature, uses and implications of internet technology.
- An overview of security issues related to data communication in networks

Course outcome: On successful completion of the course, a student will be able to:

- Explain how communication works in computer networks and to understand the basic terminology of computer networks
- Explain the role of protocols in networking and to analyze the services and features of the various layers in the protocol stack.
- Understand design issues in network security and to understand security threats, security services and mechanisms to counter.

Software Engineering

Course objectives: Students will try to learn:

- To offer students a glimpse into real world problems and challenges that need IT based solutions
- To enable students to create very precise specifications of the IT solution to be designed.
- To introduce students to the vast array of literature available of the various research challenges in the field of IT
- To create awareness among the students of the characteristics of several domain areas where IT can be effectively used.
- To enable students to use all concepts of IT in creating a solution for a problem
- To improve the team building, communication and management skills of the students.

Course outcome: Students will be able to:

- Discover potential research areas in the field of IT
- Conduct a survey of several available literature in the preferred field of study
- Compare and contrast the several existing solutions for research challenge
- Demonstrate an ability to work in teams and manage the conduct of the research study.
- Formulate and propose a plan for creating a solution for the research plan identified
- To report and present the findings of the study conducted in the preferred domain

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	6. Electronics , BSCCBCSELEYCM

Program Specific Objectives (PSO):

1. To pass on advanced and comprehensive knowledge in the area of Electronic Science
2. To train the students to be inquisitive and think in an innovative way
3. To impart basic and translational research skills with technical excellence and make them research and industry ready

Program specific Outcome (PSO):

1. In depth knowledge gained during the course of three years helps the students to join the higher courses or industries as beginners.
2. Helps the students to answer the questions with confidence in competitive examination
3. Develop practical skills along with their theory components,
4. They develop entrepreneurial skills with the help of skill-based courses and alumni interaction
5. Overall goal is reached towards Professional Competence

DSC: Discipline Specific Core

DSE: Discipline Specific Elective

I Semester

Network Analysis and Analog Electronics

Course objectives: This course will enable students:

1. To explain the basic concepts and laws of DC and AC electrical networks and solve them using mesh and nodal analysis techniques.
2. To introduce students with the fundamental concepts of network theorems and analysis.
3. To introduce open circuit, short circuit, transmission, hybrid parameters and their interrelationship.
4. To design and demonstrate diode circuits.
4. To explain various BJT, FET and UJT connections and configurations.
5. To analyse the different RC and LC oscillator circuits to determine the frequency of oscillation.

Course outcome: After successful completion of the course student will be able to

1. Apply concepts of electric network topology, nodes, branches, loops to solve circuit problems including the use of computer simulation.
2. Understand various functions of network and also the stability of network.

3. Synthesize the network using passive elements.
4. Design the different oscillator circuits for various frequencies
5. Know about the multistage amplifier using BJT and FET in various configuration to determine frequency response and concept of voltage gain.

II Semester

Linear and Digital Integrated Circuits

Course objectives: Students will try to learn:

1. To understand the concepts, working principles and key applications of linear integrated circuits.
2. To perform analysis of circuits based on linear integrated circuits.
3. To design circuits and systems for particular applications using linear integrated circuits.
4. To understand number representation and conversion between different representation in digital electronic circuits.
5. To analyse logic processes and implement logical operations using combinational logic circuits.
6. To understand characteristics of memory and their classification.
7. To understand concepts of sequential circuits and to analyse sequential systems in terms of state machines

Course outcome: After successful completion of the course student will be able to

1. Understand the fundamentals and areas of applications for the integrated circuits.
2. Analyse important types of integrated circuits.
3. Demonstrate the ability to design practical circuits that perform the desired operations.
4. Understand the differences between theoretical, practical & simulated results in integrated circuits.
5. Select the appropriate integrated circuit modules to build a given application.
6. Develop a digital logic and apply it to solve real life problems.
7. Analyse, design and implement combinational logic circuits.
8. Classify different semiconductor memories.
9. Analyse, design and implement sequential logic circuits.

III Semester

Communication Electronics

Course objectives: This course will enable students:

1. To introduce the concepts of analog and digital communication systems.

2. To equip students with various issues related to analog and digital communication such as modulation, demodulation, transmitters and receivers and noise performance.
3. To make the students understand the concepts AM, FM, PM.
4. Explain the basics of sampling and quantization, ASK, FSK, PSK.
5. To study the concept of satellite communication and various frequency bands, orbits etc.
6. To understand the concepts of mobile communications.

Course outcome: After study through lectures and assignments, students will be able to

1. Gain the knowledge of components of analog communication and digital communication systems.
2. Analyse various methods of baseband/band pass Analogue transmission and detection.
3. Analyse and allocate performance of components of an analogue communication system and to design analogue communication systems.
4. Generation and detection of pulse modulation techniques and multiplexing.

IV Semester

Micro Processor and Microcontroller

Course objectives: This course will enable students:

1. To develop background knowledge and core expertise of microprocessor and microcontroller.
2. To know the importance of different peripheral devices and their interfacing to microcontrollers.
3. To know the design aspects of microprocessor and microcontrollers.
4. To write assembly language programs of microprocessor and microcontrollers for various applications.
5. To introduce the concept of embedded systems.

Course outcome: At the end of course, a student will be able to:

1. Draw and describe architecture of 8085 microprocessor and 8051 microcontroller.
2. Interface various peripheral devices to the microcontrollers.
3. Write assembly language program for microprocessor and microcontrollers.
4. Analyse architecture of embedded systems.

IV Semester

Electronics Instrumentation

Course objectives: This course will enable students to:

1. Define and describe accuracy and precision, types of errors, statistical and probability analysis.

2. Describe the operation of Ammeters, Voltmeters, Multimeters and develop circuits for multirange Ammeters and Voltmeters. .
3. Describe functional concepts and operation of various Analog and Digital measuring instruments.
4. Describe and discuss functioning and types of Oscilloscopes, Signal generators, AC and DC bridges.
5. Recognize and describe significance and working of different types of transducers.

Course outcome: After studying this course, students will be able to:

1. Describe instrument measurement errors and calculate them.
2. Describe the operation of Ammeters, Voltmeters, Multimeters and develop circuits for multirange Ammeters and Voltmeters.
3. Describe functional concepts and operation of Digital voltmeters and instruments to measure voltage, frequency, time period,
4. Describe and discuss functioning and types of Oscilloscopes, Signal generators and Transducers.
5. Utilize AC and DC bridges for passive component and frequency measurements.

VHDL

Course objectives: This course will enable students to:

1. Learn different VHDL constructs.
2. Familiarize the different levels of abstraction in VHDL.
3. Understand timing and delay Simulation.
4. Learn VHDL at design levels of data flow, behavioural and structural for effective modelling of digital circuits.
5. Study the concepts of generics, configuration and sub-programs.
6. Get an introduction to Verilog

Course outcome:

1. At the end of this course, students should be able to
2. Write VHDL programs in gate, dataflow, behavioural and structural modelling levels of Abstraction.
3. Write simple programs in VHDL in different styles.
4. Design and verify the functionality of digital circuit/system using test benches.
5. Identify the suitable Abstraction level for a particular digital design. .
6. Perform timing and delay Simulation

IV Semester

Photonic Devices and Power Electronics

Course objectives: This course will enable students:

1. To understand the classification of photonic devices like LEDs, LCDs, Photodetectors, Photoconductors and Solar Cells.
2. Understand the working of various power devices like SCR, DIAC, TRIAC POWER MOSFET and IGBT.
3. Study and analysis of thyristor circuits with different triggering techniques.
4. Learn the applications of power devices in controlled rectifiers.
5. Study of power electronics circuits under different load conditions.

Course outcome: After studying this course, students will be able to:

1. Determine the wavelength of different light.
2. Understand the application of various photonic devices.
3. Describe the characteristics of different power devices and identify the applications.
4. Determine the output response of a thyristor circuit with various triggering options.
5. Determine the response of controlled rectifier with resistive and inductive loads.

Digital Signal Processing

Course objectives: This course will enable students to:

1. Understand the mathematical description of continuous and discrete time signals and systems.
2. Analyse the signals in time domain using convolution difference/differential equations
3. Classify signals into different categories based on their properties. .
4. Analyse Linear Time Invariant (LTI) systems in time and transform domains.
5. To study the bilinear transformation, digital filters and DSP processor.

Course outcome: At the end of the course, students will be able to:

1. Classify the signals as continuous/discrete, periodic/apperiodic, even/odd, energy/power and deterministic/random signals. .
2. Determine the linearity, causality, time-invariance and stability properties of continuous and discrete time systems.
3. Compute the response of a Continuous and Discrete LTI system using convolution integral and convolution sum.
4. Determine the spectral characteristics of continuous and discrete time signal using Fourier analysis.
5. Compute Z-transforms, inverse Z- transforms and transfer functions of complex LTI systems.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	7. Environmental Science BSCCBCSENVYCM

Program specific objectives:

- To impart basic knowledge in Environmental science
- To give the skills required related to Environmental science
- To make the students aware of the various facets of Environmental Science
- To make the students ready for placements in Environmental related organizations

Program specific outcome:

After completing this program specific discipline the students

- Get basic knowledge of Environmental science and this helps them to go for higher studies and do better in their profession
- Trained with skills required for their higher studies and jobs
- Students are placed in various organizations and companies and they regularly enter to higher studies also.

B.Sc., Environmental Science

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Atmosphere and climate change
2	II	DSC-II	Ecology and environment
3	III	DSC-III	Earth and environmental science
4	IV	DSC-IV	Environmental chemistry
5	V	DSE-IA	Environmental microbial technology
		DSE-IB	Natural resource management and sustainability
6	V	SEC-1	Industrial safety, health and environment
7	VI	DSE-2A	Environmental pollution analysis, control & management
		DSE-2B	Environmental legislation and policy
8	VI	SEC-2	Watershed Management
		AECC 3A	Environmental Studies

- **DSC:** Discipline Specific Core
- **DSE:** Discipline Specific Elective
- **SEC:** Skill Enhancement Course

Atmosphere and Climate Change

Course objectives:

- To understand the dynamics of atmospheric processes.
- Highlights the anthropogenic intervention which has led to global climate change.
- The paper explores the effects of global changes on human communities and initiatives taken at global and regional levels to combat them.

Course outcome:

- Students will understand the Earth's atmosphere, meteorology, pollution, gas emissions, and airborne contaminants, thereby the dynamics of atmosphere.
- Studying climate and a changing climate is important, which will affect people around the world.
- Analysis of atmospheric circulation and/or temperature alone can be used for modelling or prediction purposes.
- Climatic Change is important since it helps to determine future climate expectations.
- Preparing for climate change — also known as climate change adaptation — is about reducing the risk of climate change impacts to people, places and resources.

II Semester

Ecology and Environment

Course objectives:

- Basic understanding of ecosystem and its structural and functional aspects.
- It explores the knowledge of interconnections among all the biotic and abiotic components of environment.
- To understand the dynamic nature of the ecological processes in maintaining the equilibrium.

Course outcome:

- Students will acquire new knowledge of the interdependence between people and nature that is vital for food production, maintaining clean air and water, sustaining biodiversity.
- They understand to maintain a mosaic of habitats that ensures the survival of a rich variety of species.
- They will learn how Biodiversity boosts ecosystem productivity where each species, no matter how small, all have an important role to play.
- Students will have an insight like larger number of plant species means a greater variety of crops. Greater species diversity ensures natural sustainability for all life forms.
- Inculcates conservation aspects which help in preventing soil erosion, desertification, deforestation, natural disasters etc.

III Semester

Earth and Environmental Science

Course objectives:

- The focus is on interactions between the solid Earth, its water, its air and its living organisms, and on dynamic, interdependent relationships between these four components.
- A good exposure to basic structure and composition of the Earth.
- It deals with the interactive processes in the inner as well as outer Earth's surface.
- Natural disasters education is a very important part in the prevention of natural disasters.

Course outcome:

- Earth Science is important because most human activities are related to interaction with the planet Earth.
- Students gain knowledge about how these relationships produce environmental change at different timescales.
- They also strive to understand past and present environmental processes so that reliable and scientifically based predictions can be made about the future.
- It is a good platform to learn the physical and chemical properties of soil which enables them to understand how they affect the plant growth and thereby fertilizing management practices.
- Students acquire sufficient knowledge about rainwater harvesting which enhances stored water capacity, revitalize the groundwater level and reduce surface runoff and soil erosion.
- Exploring more about natural disasters yield positive results by reducing the risks and consequences.

IV Semester

Environmental Chemistry

Course objectives:

- The paper aims to build a conceptual understanding of students by exposing them to the basic principles behind various processes.
- Environmental Chemistry is the study of the changes chemicals make in the environment, such as contamination of the soil, pollution of the water, degradation of chemicals, and the transport of chemicals upon the plants and animals of the immediate environment.
- It gives a clear knowledge on the chemically induced soil, its effects and its relationship with the plants and animals of the environment.

Course outcome:

- This paper enables students to develop methods and procedures to reduce the contaminants or the chemicals in the air, water or soil.
- Students gain knowledge about the health impacts of various types of pollution.
- Students understand the processes occurring in the environment which are impacted by humankind's activities.
- They get to know about the different chemical reactions, sampling and analytical techniques.
- Students are exposed to the effects of chemical fertilizers and pesticides on the environment and also encourage the use of bio-fertilizers and bio-pesticides.

Environmental Microbiology

Course objectives:

- The course focuses on the variety of microbes, their habitats and interactions and their significance.
- It gives a wide vision on the spread of various diseases through microbes and a proper treatment for the disease.
- The paper presents an objectives view of the application of biotechnological aspects in tackling the environmental problems.
- The course also provides knowledge on how to avoid the use of hazardous pollutants and wastes that affect the natural resources and the environment.

Course outcome:

- Students get a valuable knowledge about the role of microbes in the environment.
- They are also exposed to the various effects of microbes on the environment and how it can be reduced.
- Students will get to know how the contaminated soil might be corrected or remedied on-site or loaded into containers and transported for treatment.
- It is a good platform for them to learn and transform plants into biofuels.
- Develop procedures to convert waste into biogas or other cleaner sources of energy.
- This study explains the contributions of bioenergy and how it can offer to reduce the use of fossil fuels in cities.
- They get opportunities for investment in biofuels which boosts the growth of economy which means that there will be more jobs and new sources of income.

Natural resource management and sustainability

Course outcome

- Students get a valuable knowledge about the role of natural resources of the environment.
- Students will get to know how the natural resources can best used without causing harm to the environment
- It is a good platform for them to learn about the sustainable way of approach to environment which is the need of the hour

Industrial safety, health and environment

Course outcome

- Students get a valuable knowledge on safety concerns to be followed in an industry which should environmental friendly
- They are also exposed to the various aspects to related to health protection of common man
- Students will get to how economic growth by establishing industry always should be associated with safe and environmental friendly waste treatment.

VI Semester

ENVIRONMENTAL POLLUTION ANALYSIS, CONTROL & MANAGEMENT

Course objectives:

- This paper throws light upon the pollution prevention approaches that can be applied to all potential and actual pollution-generating activities.
- Further it emphasises on prevention practices that are essential for preserving wetlands, groundwater sources and other critical ecosystems - areas in which we especially want to stop pollution before it begins.
- Here we even study Environmental Impact Assessment (EIA) which is the project of policies, plans, and programs, which are related to the proposed program associated with the organ of the state.
- This paper gives an overview of Environmental laws which plays an important role in the protection of human health as well as the environment.

Course outcome:

- Students learn that pollution prevention can reduce environmental damages with suitable action.
- They can analyse the pollutants qualitatively and quantitatively and based on the results action can be taken.
- EIA is a formal study process through which they can predict the environmental consequences of any development project.
- EIA study will ensure that the potential problems are foreseen and addressed at an early stage in project planning and design, to achieve sustainable development. Students understand the role of the Environmental Law, to make sure that the practices used in the environment do not cause harm to the environment, human or animal health.

VI Semester

DSE-2B- Environmental legislation and policy

Course outcome:

- Students learn various Environmental legislation and policies of the governments
- This is very much needed for them in the future course of action

VI Sem SEC-2 Watershed Management

Course outcome

- Students learn various aspects of watershed management
- This is very much needed for them to plan effective utilisation of water in a sustainable way

AECC 3A- Environmental Studies

Course objectives:

- To understand the multidisciplinary nature of natural resources their associated problems.
- To develop the concept of conservation of biodiversity and ecosystems for future generations.

Course outcome:

- Students will understand the uses and exploitation of various natural resources like forest, water, minerals food and energy, along with case studies to preserve and sustain our environment.
- It will enable them to understand the concept and types of ecosystems.
- Conservation of biodiversity, endangered, endemic species are studied at global, national and local levels.
- Help the students to understand the causes, effects and control measures of various environmental pollution also by taking into account the social issues associated with it

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	8. Food and Nutrition BSCCBCSFSNYCM

Program Specific Objectives:

- To provide students with the knowledge of basic terminology and several aspects of nutrition and the functions of food in healthy life sustenance;
- To ensure that students are familiar with the food classification, nutrition during special conditions and role of special functional food;
- To equip students with knowledge and understanding of modern aspects of nutritional science and novel food usage.
- To build competent professional in Food Science and Processing and work in Food Research Laboratories, Research institutes, baking industry, dairy industry, etc.
- To build competent professional Nutrition & Dieticians in hospitals and specialty clinics and for Sports nutrition. Thereby, the professionals can find job prospects in the field as Nutrition and Diet consultants in Food service organizations like Hotels, Hospitality services, Geriatric homes and also as administrators of Industrial canteens and other specialties.

Program Specific Outcome:

- A successful completion of this course will enable students to: summarize and critically discuss/ understand both fundamental and applied aspects of food science and nutrition.
- They will be able to explain functions of specific nutrients in maintaining health, identifying nutrient specific foods and apply principles from the various facets of food science and related disciplines to solve practical as well as real-world problems.
- Use current information technologies to locate and apply evidence-based guidelines and protocols and get imparted with critical thinking to take leadership roles in fields of health, food research laboratories, dietetics, special nutritional needs and nutritional counseling.

B.Sc., Food Science and Nutrition

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Human Physiology I
2	II	DSC-II	Human Physiology II
3	III	DSC-III	Principles of Nutrition I
4	IV	DSC-IV	Principles of Nutrition II
5	V		Food Science
			Family Nutrition
6	VI		Food Processing and Quality Control
			Therapeutic Nutrition

I Semester **Human Physiology I**

Course objectives:

- To understand the basic physiological principles and structure of various organs.
- To understand the importance & integrated function of various physiological systems including skeletal, muscular, lymphatic, cardiovascular, digestive and nervous systems.

Course outcome: students will acquire knowledge on

- Basics of human physiology
- The structure, specific functions & regulatory mechanisms of the systems of the human body.
- Anatomical and physiological terminology to comprehend and communicate information on body structure and function.

II Semester **Human Physiology II**

Course objectives:

- To have an enhanced knowledge and appreciation of human physiology and human genetics
- To understand the structure, functions and physiological processes of various organ systems.

Course outcome: students will acquire knowledge on

- Basics of human genetics and the physiology of respiratory, excretory, endocrine and reproductive system.
- The structure, importance, normal functioning of the organ systems of the body and their regulatory mechanisms.

III Semester **Principles of Nutrition-I**

Course objectives:

- To obtain a better understanding of the principles of nutrition and its role in cellular and physical growth.
- To provide an overview of the major macronutrients relevant to human health.
- To understand the techniques of measurement of energy expenditure and protein quality.

Course outcome: students will acquire knowledge on

- Classification, metabolism, and importance of macronutrients
- Determination of energy and its metabolism

IV Semester **Principles of Nutrition-II**

Course objectives:

- Provide a solid knowledge base from which can describe and explain the importance of water, micronutrients and identify their roles within a functioning organism.
- Discuss the scientific rationale for defining nutritional requirements in healthy individuals and populations.
- To provide an understanding of the composition of body and the various methods of studying body composition.

Course outcome: students will acquire knowledge on

- The importance of water and micronutrients in functioning of human body.
- Composition of the body and methods to assess the same.
- Computation of Nutrients requirements.

V Semester
Food Science

Course objectives:

- To obtain knowledge on different food groups and their contribution to nutrition.
- To understand the structures, compositions, processing methods, preparations and quality characteristics of different food groups.

Course outcome: students will gain knowledge on

- Different food groups, nutritional composition, preparations, and quality parameters.
- Different processing techniques and its effect on nutritional composition.

Family Nutrition

Course objectives:

- To attain knowledge on nutrition needs & demands of different age groups.
- To understand various deficiency disorder & the importance of their intervention programs on community level

Course outcome: students will get knowledge on

- Developing skills in nutrition sector on community level & NGO's.
- Identifying & preventing nutritional disorders.

VI Semester
Food Processing and Quality Control

Course objectives:

- To provide basic understanding on principles and methods of Food preservation by traditional and modern technologies
- To gain knowledge of micro-organisms in relation to food and food preservation
- To understand the role of micro-organisms in spoilage of various foods
- To gain knowledge on food safety, hazards and designing of new food products

Course outcome: students will acquire knowledge on

- The principles behind Food preservation by traditional and modern technologies
- Microorganisms responsible in the spoilage of different food groups.
- Food borne disease, infections and mycotoxins
- Commercial techniques of food preservation and packaging

Therapeutic Nutrition

Course objectives:

- To understand the concepts, principles of nutrition in diet therapy and develop the ability to plan and prepare diets for therapeutic conditions and role of dietitian.
- To apply knowledge of ethical practice in medical nutrition therapy, intervention programs.

Course outcome: students will acquire knowledge on

- role of dietitian in the hospital and community
- role of diet in different disease conditions planning and preparation of therapeutic diets.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	9.Geology BSCCBCSGEOYCM

Program specific objectives:

- To impart basic knowledge in Geology
- To give the skills required related to Geology
- To make the students aware of the various facets of Geology
- To make the students ready for placements in various organizations like Geological survey of India and other companies which need skill sets of geology
- To enable to set their own consultancy/start ups

Program specific outcome:

After completing this program specific discipline the students

- Get basic knowledge of Geology and this helps them to go for higher studies and do better in their profession
- Trained with skills required for their higher studies and jobs
- Students are placed in various organizations and regularly enter to higher studies also.
- Students have started their consultancy services

B.Sc., Geology

Sl No	Sem	Course	Title of the Paper
1	I	DSC-I	Earth Systems Science
2	II	DSC-II	Mineral science
3	III	DSC-III	Petrology
4	IV	DSC-IV	Palaeontology and stratigraphy
5	V	DSE-IA	Economic geology
		DSE-IB (any 1)	Engineering geology and hydrogeology,
			Gemology, Environmental Geology and Medical Geology
6	VI	DSE-2A	Structural geology and exploration geology
		DSE-2B (any 1)	Remote sensing, GIS, disaster and natural hazards management
			Mining Geology and Remote Sensing

I Semester
Earth Systems Science

Course outcome:

The study of this paper strengthens students knowledge with respect to understanding the essentials of the structural dynamics of the earth.

The students will understand the origin of our solar system and planets, including earth. The students are exposed to the Geological time scale and be able to appreciate the dynamics of earth evolution through time.

II Semester **Mineral Science**

Course outcome:

Mineral Kingdom:
Studying the basics of mineralogy and crystallography helps in understanding and building the overall knowledge in Geology.

The students will be able to identify common rock-forming minerals in hand specimens as well as in thin sections. Besides, they will familiarise themselves with various crystal lattice and crystal systems.

III Semester **Petrology**

Course outcome:

On completion of the course the students will have gained an understanding of the processes involved in the formation of igneous, sedimentary and metamorphic rocks, their textures, structures, classifications and their importance.

Students learn to identify, describe and classify rocks using hand specimens. The students will also acquire skills to determine and interpret geochemistry of rocks.

IV Semester **Palaeontology and Stratigraphy**

Course outcome:

The study of stratigraphy and Palaeontology encompasses the aspects of the age of the earth, chronological arrangement of rocks and appearance and evolution of life through the geologic time. The knowledge of the concepts in stratigraphy, correlation, and paleontology would enable the students to understand the changes that occurred in the history of the earth and relate them to their field observations and also, in understanding the framework of the stratigraphy of India

The students will acquire skills of discovering and describing fossils and their taxonomic classification. They will also be introduced to interpreting paleoclimate and paleoenvironment conditions.

V Semester

Economic Geology

Course outcome:

By the end of this course the student will have learnt about the distribution of mineral deposits both metallic and non-metallic, techniques of mineral exploration and exploitation, estimation of ore reserves, environmental impact of mining, and the importance conservation of mineral resources. Upon completion of this course, the student will acquire all knowledge and skills required for himself/herself becoming a mining geologist.

Engineering Geology and Hydrogeology

ENGINEERING GEOLOGY:

Course outcome:

Upon completion of the course the student will become aware of the importance of geological studies and its applicability to various engineering problems.

The student will be educated on geological site investigations for engineering structures and will provide skills in geological mapping and making geotechnical measurements.

HYDROGEOLOGY:

Course outcome:

On completion of the course, the student will have gained an understanding of hydrogeological concepts, exploration, exploitation and recharge of groundwater and methods of monitoring groundwater quality and sources of pollution

Students will be able to acquire skills of systematic hydrogeological surveys and water quality Monitoring

Gemology, Environmental and Medical Geology

Gemology:

Course outcome:

The basic idea is to make students well versed with the different terminologies used in the gem industry and to provide skills to become a successful gemmologist.

The students will acquire skills which will be useful to them in the gem industry.

Environmental Geology:

Course outcome:

Know the basic fundamentals of earth science as applied to the interaction between human activity and the natural environment. Understand the occurrence and availability of both surface and subsurface water resources and the role of the hydrologic cycle and pollution. Understand the role of plate tectonics in causing earthquakes and how this understanding can aid the assessment of seismic hazard.

Students will be able to test and evaluate water quality for drinking and agricultural use. They will also have knowledge about various natural disasters.

Medical Geology

Course outcome:

On completion of the course the student will be able to understand the distribution of trace elements and its cyclic movement through the abiotic-biotic environment and their influence on human health, flora and fauna.

The course provides a basic understanding of geogenic and anthropogenic distribution of trace elements, their toxic effects on human health and that of flora and fauna.

VI Semester
Structural Geology & Exploration Geology

Structural Geology:

Course outcome:

The course deals with geological structures resulting from the action of these forces on rocks. The student will gain knowledge of the geometry of the rock structures, understand the mechanism of the evolution of rock structures and its application in the field.

The students learn the skills of identifying different structure and measurements using Brunton compass. This is fundamental to geological mapping. This course also helps to know how to use structures and help students appreciate the dynamic nature of the Earth lithosphere. Learn how to read geologic maps and solve simple map problems using strike and preparations of cross sections.

Exploration Geology:

Course outcome:

The course provides the student essential and basic concepts of mineral expiration techniques and the art and science of mining mineral resources. Geophysics deals with methodologies for extracting geological information out of geophysical datasets generated from different petrophysical properties. In Geophysical exploration the student will gain first-hand knowledge dealing with the principles and their significance

This course tries to impart skills related to Geology in mining and enable him/her to perform duties of a geologist at the mining site. The students will acquire skills to use GPS, Electrical Resistivity and other methods for exploration. These have wide application in mineral exploration, groundwater studies, petroleum geology, etc.

Remote Sensing, GIS, Disaster and Natural Hazards Management

Remote Sensing:

Course outcome:

The course is meant to address the fundamental techniques used for remote sensing. At the end of this course, the student will be appraised with all the theoretical knowledge, information and skills to use Remotely Sensed data for geological applications.

After completion of this course, the student will be well versed with the world of Remote Sensing and the applications and Interpretation of data related to geosciences.

GIS:

Course outcome:

This course provides a theoretical and practical, hands-on approach to spatial database design and spatial data analysis with Geographical Information Systems as applied to the various fields of geosciences.

The course provides knowledge of the fundamentals of GIS theory, and the stages of developing and using a GIS platform of various geological applications. It also promotes proficiency in the use of the GIS softwares for visualization, query, mapping, and analytical purposes.

Disaster and Natural Hazards Management:

Course outcome:

Know the basic fundamentals of earth science as applied to the interaction between human activity and the natural environment. Understand the occurrence and availability of both surface and subsurface water resources and the role of the hydrologic cycle and pollution. Understand the role of plate tectonics in causing earthquakes and how this understanding can aid the assessment of seismic hazard.

Students will be able to test and evaluate water quality for drinking and agricultural use. They will also have knowledge about various natural disasters.

Mining Geology and Mineral Processing

Course outcome:

By the end of this course the student would have learnt about techniques of mineral exploration and exploitation, estimation of ore reserves, environmental impact of mining, and the importance conservation of mineral resources.

Upon completion of this course, the student will acquire all knowledge and skills required for himself/herself becoming a mining geologist.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	10. Mathematics BSCCBCSMATYCM

PROGRAM SPECIFIC OBJECTIVES:

- 1) To equip students knowledge to learn and explain mathematics on their own.
- 2) To ensure students read and understand mathematical ideas in real _ world problems.
- 3) To provide students with the knowledge of mathematics necessary for their employment.
- 4) To build competent professionals in mathematics having experience in using technology to address mathematical ideas.
- 5) To provide students with the knowledge to read, write and understand basic proofs and problem solving skills.

PROGRAM SPECIFIC OUTCOME:

- 1) A successful completion of the course will enable the students to demonstrate the ability to effectively utilize variety of techniques and strategies of fundamental and advanced mathematics in daily life.

- 2) Students will be able to demonstrate the ability to analyse data and draw appropriate conclusions in various branches of mathematics and related disciplines in solving practical as well as real world problems.

B.Sc., Mathematics

Sl No	Sem	Course	Title of the Paper
1	I	DSC-I	Algebra and Calculus I
2	II	DSC-II	Algebra and Calculus II
3	III	DSC-III	Analysis and Calculus
4	IV	DSC-IV	Algebra and Calculus II
5	V	DSE-IA	Algebra and Analysis II
		DSE-IB	Applied mathematics I
		DSE-IC	Statistics and Probability
6	VI	DSE-2A	Numerical Analysis and complex analysis
		DSE-2B	Linear Algebra
		DSE-2C	Applied mathematics II

I Semester

Algebra and Calculus I

Course objectives: Students will try to learn:

- To understand the basic concept of equations and graphical representation.
- Demonstrate and perform on functions like limits, continuity & differentiability.
- Explain the representation of data and information related to curves and angles.

Course outcome: On completion of the course the student should be able to:

- Familiar with numbers and functions.
- Understand the concepts like radius vector & tangent of curves.
- Basic ideas like symmetry, transformation & reciprocal of equations.

II Semester

Algebra and Calculus II

Course objectives: Students will try to learn:

- To learn problem solving techniques on matrices.

- To make the student learn theorems like Rolle's & Mean value.
- To learn & develop concepts related to line and multiple integrals.

Course outcome: Students will be able to:

- Analyze a given problem and develop the solution of problems.
- Use different techniques to solve Differential equations.
- Understand the logics to find the area by integration

III Semester

Analysis and Calculus

Course objectives: Students will try to learn:

- To develop the concept of sequence of a function and partial derivatives.
- Learn the concept of Asymptotes & Envelopes.
- To learn the concept of vectors and scalars.

Course outcome: On successful completion of the course students will be able to:

- Identify importance of sequence of a function, convergent, divergent & oscillatory.
- Demonstrate proficiency in calculus.
- Understand the difference between Differentiation and partial differentiation.

IV Semester

Algebra and Analysis I

Course objectives: Students will try to learn:

- To describe a sound introduction to the Groups theory.
- To give a good formal foundation on the infinite series
- To demonstrate the principles cossets of group

Course outcome: On successful completion of the course, a student will be able to:

- Gain a good understanding of the knowledge on groups theory as well as normal group, homomorphism of groups.
- Acquire knowledge in fundamentals of infinite series, convergent, divergent & oscillatory.
- Analyze the difference between Sequence and series.

V Semester

Algebra and Analysis II

Course objectives: Students will try to learn:

- Conceptualize the basics of Rings, fields and related areas.
- Explain the representation of an integral as a Riemann integral and improper integral.
- Construct clearly written proofs which use correct terminology and cite previous theorems

Course outcome: On successful completion of the course, a student will be able to:

- Construct clearly written proofs which use correct terminology and cite previous theorems.
- Familiar with Fields and ideals
- . Understand the techniques of integration

Applied mathematics I

Course objectives: Students will try to learn:

- To understand the concept of D operators in differential equations.
- To understand the concepts and implementation laplace transformations.
- Evaluate derivatives for complexly constructed elementary functions

Course outcome: Students will be able to:

- Distinguish between ordinary differential equation and partial differential equation.
- Evaluate functions using laplace transformations.
- Identify the primary functions like even and odd functions.

Statistics and Probability

Course objectives: Students will try to learn

- Develop problem solving skills through diverse applications of the integral.
- Learn to read and understand mathematical/statistical results and proofs as well as formulate his/her own proof to various problems
- Apply knowledge and skills in probability and statistics related sciences
- Gain a solid foundation in the theory of probability, which provides the foundation for modern statistical inference

Course outcome: On successful completion of the course, a student will be able to:

- Distinguish between discrete and continuous random variables and give examples of each.
- Define the mean and the variance for a random variable and calculate the expected values and variances of discrete and continuous random variables
- Define the probability distribution for discrete and continuous random variables and list examples of distributions of some common random variables.
- Define the concepts of joint, marginal, and conditional distributions essential to finding the probabilities of various sample outcome

VI Semester

Numerical Analysis and complex analysis

Course objectives: Students will try to learn:

- To learn problem solving techniques on complex analysis.
- To make the student learn theorems like Cauchy's Riemann equation.
- To learn & develop concepts related to transformation in complex plane.

Course outcome: Students will be able to:

- Analyze a given problem and develop the solution in numerical methods like bisection method and Runge kuttas method.
- Use different techniques to solve finite difference and forward and backward difference.
- Understand the logics to find the analytic function and harmonic function

Linear Algebra

Course objectives: Students will try to learn:

- Develop methods and problem solving skills in solving systems of linear equations
- Apply the knowledge and skills in natural and social sciences
- Learn theory of matrices, determinants, vector spaces, linear transformations, eigen values and eigenvectors

Course outcome: On completion of the course the student should be able to:

- Model and systematically solve systems of linear equations using matrix notation
- Demonstrate factual knowledge of the fundamental concepts of spanning, linear independence, and linear transformations.
- Use matrix algebra to analyze and solve equations arising in many applications that require a background in linear algebra.
- Utilize vector space terminology and describe how closely other vector spaces resemble R^n

Applied Mathematics II

Course objectives: Students will try to learn:

- Understanding of series solution of differential equations and techniques involved in learning special functions.
- Understanding of the role and relation of Fourier transforms in different areas of mathematics
- Understanding of different problems and concepts in Z-transforms and Boolean algebra.

Course outcome: Students will able to:

- Select and implement different problem solving techniques.
- Develop some basic level methods and formulae to solve problems.
- Define the basic concepts and importance of Fourier transforms and related areas

Sl No.	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	11. Microbiology BSCCBCSMICYCM

Program specific objectives (PSO):

- To reveal and explore basic and modern knowledge in the area of invisible microbial world
- To up skill the students intellectual and encourage their critical as well as innovative way of thinking
- To train students for academics, research, industries as well as for entrepreneurship by directing their fundamental theory and practical research skills with technical excellence.

Program specific outcome (PSO):

- Knowledge acquired over the course of three years aids students in rapidly acclimating to the work environment such trainees, researcher, teaching and entrepreneur.
- Supports student's confidence in answering questions during competitive exams and interviews.
- Acquire sufficient information to suggest research ideas with the help of the subject teacher.
- Gain enough knowledge to propose research ideas with guidance from the concerned subject teacher.
- Apply learned practical skills and approach along with their theory concepts, when selected for various positions in both academic institutions and R & D programs of industries.
- Build entrepreneurial skills through skill-based courses and networking with alumni.
- Professional Competence is attained through the development of effective communication and interactive skills for teaching the subject at the graduate and postgraduate levels.

B. Sc. Microbiology

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	General Microbiology
2	II	DSC-II	Microbial Diversity
3	III	DSC-III	Microbial Physiology, Metabolism & Molecular Biology
4	IV	DSC-IV	Recombinant DNA Technology and Food Microbiology
5	V	DSE-IA	Environmental Microbiology
		DSE-IB	Soil and Agricultural Microbiology
6	VI	DSE-2A	Industrial Microbiology
		DSE-2B	Immunology and Clinical Microbiology

I Semester

General Microbiology

Course objectives:

- Students will be acquainted with the basic concept microbial taxonomy such as identification, classification and nomenclature taxonomy.
- To know the different classification system
- To acquire knowledge on different biosafety regulatory framework for prokaryotes.
- To understand scope of the various branches of the microbiology
- Student will know the use of various microbial techniques to study microbial diversity.

Course outcome:

- Master aseptic techniques and be able to perform routine culture handling tasks safely and effectively.
- Understand the basic microbial structure and function and study the comparative characteristics of prokaryotes and eukaryotes.
- Understand the salient features, structural similarities and differences among various physiological groups of bacteria/archaea along with classification, nomenclature and significance of microbes.
- To know the applications and understand mode of actions of physical and chemical means of sterilization to control the growth of microorganisms.
- Acquire knowledge regarding principles and applications of different types of staining and microscopes for the identification of bacteria, fungi and algae.
- Comprehend the various methods for identification of unknown microorganisms

II Semester

Microbial Diversity

Course objectives:

- To get knowledge on different domains/ classification system of living organisms.
- students will be able to demonstrate a knowledge and understanding of microbial taxonomy
- For classical conventional and modern molecular characterization technological tools
- To acquire knowledge of cellular organization, ultra structure, life cycle and economic importance of prokaryotic (Eubacteria, Archaea, Cyanobacteria) and Eukaryotic (Algae, Fungi and protozoans) with acellular entities viruses.

Course outcome:

- Understanding of basic classification and microbial structure and similarities and differences among various groups of microorganisms such as bacteria/archaea/cyanobacteria/fungi/protozoans.
- Acquaintance on study of microbial diversity using different methods and systematic of bacteria and archaea using polyphasic approach.
- Understand the various methods for identification of isolated and unculturable microorganisms.

III Semester

Microbial Physiology, Metabolism and Molecular Biology

Course objectives:

- The course learning objectives is to provide the core principles and specialized knowledge of microbial physiology.
- To develop understanding about microbial metabolism, growth and energy generation
- Gain knowledge of various fermentation pathways
- Familiarize students with concepts of nitrogen and phosphate assimilation, electron transport chain and transfer of genetic information among microbial communities.
- Overview and conceptual knowledge microbial enzyme types, structure, classification, nomenclature, mechanism, factors influencing enzyme action /kinetics with inhibition and regulation.
- To acquire knowledge on historical milestones and development in molecular biology.
- To up skill student knowledge and concepts of genome organization, structure and chemical composition prokaryotes, eukaryotes and viruses.
- To gain knowledge on mechanism of replication, transcription, translation and regulation gene expression
- To know and understand the concept of molecular basis of mutations and recombination among microorganisms.

Course outcome:

- Acquaint with basics of microbial physiology and metabolism
- Understand major fermentation, aerobic and anaerobic pathways for energy generation in microbial cells.
- Students will be able to demonstrate a knowledge and understanding of:
- The basic principle of biochemistry including important molecules their economic and scientific importance inside the cell.
- The students will be able to understand the biochemical pathways of synthesis and degradation of biomolecules and the uptake and transport of different metabolites.
- Students will have comprehensive knowledge of the molecular biology of the bacteria, viruses and eukaryotes.
- Students will be trained for handling various advanced molecular biology techniques and the knowledge gained will help them to get a job in molecular biology laboratories and the knowledge can be applied for advanced research.

III Semester

Recombinant DNA Technology and Food Microbiology

Course objectives:

- To impart knowledge on historical background, achievements and milestones in theories, tools and techniques of rDNA Technology.
- To understand the significance rDNA Technology for commercial application in various fields.
- To introduce concept, methods and techniques employed in molecular cloning experiments.
- To up skill students knowledge with various fermented food products, their production techniques and prevention of spoilage.
- To understand food borne-illnesses with food sanitation and control.

Course outcome: Students will be able to demonstrate a knowledge and understanding of:

- rDNA principle in the development of novel microbial strains with an application in agriculture, bioremediation, vaccine development, gene therapy and disease detections.
- The students will be motivated to utilize the skills towards further research in their area of interest.
- Can become independent researchers and make impactful contributions to the field of Food Microbiology.
- It will assists student to get jobs of Quality control and Quality Assurance in various organizations besides research and academics.
- Instead of becoming job seekers, students are trained to become job providers by developing start-up industries as entrepreneurs.

III Semester

Environmental Microbiology

Course Objectives:

- To demonstrate a knowledge and concept of microbiology of air, sewage and water for environmental monitoring.
- To up skill students knowledge on distribution and diversity of microorganisms in air and aquatic environments (Sewage/water/ solid waste management)
- To understand role microorganisms in management and treatment process of solid and liquid wastes.
- To impart different methods of bioremediation of various types of industrial waste.
- To address the concept of xenobiotics and their management environmental monitoring of air pollution and their management.

Course outcome:

- Students develop the skill to think independently, plan research and execute it in different fields of Microbiology especially the environment sustainability, entrepreneurship and become job providers,
- Students can excel in academics, consultancy, industry and pollution control boards, industry as well as policy makers.
- Students will acquires knowledge of sampling, analyzing and executing environmental monitoring plans (Air and water-sewage/water/solid waste)
- Students are encouraged to undertake research on their area of interest in Environmental Microbiology.

- Students will gain knowledge of identification of a research topic, research planning and its execution.

Course objectives:

Soil and Agricultural Microbiology

Course objectives:

- To gain knowledge physiochemical properties of soils for the sustainability of soil microbial diversity
- To study and understand soil microflora, their role and interaction between them in biosphere
- To acquire knowledge of role of microorganisms in agriculture for the sustainable crop production and protection
- To up skill the concept of host-pathogen interaction by studying etiology, symptoms, epidemiology and management of various plant diseases (Bacterial/fungal/viral)

Course outcome: Students will be able to demonstrate a knowledge and understanding of:

- To understand the concept and development of biofertilizers, biocontrol, biopesticides, microbial herbicide production and their application.
- To understand the concept and development Concept of transgenic crop technology, development and its application.
- To understand the concept and development Concept of Composting and biofuels, types and applications.

III Semester
Industrial Microbiology

Course objectives:

- Students will be able to demonstrate a knowledge and understanding of: Basic fermentations processes,
- To design of various fermenters and their types.
- To understand steps involved in up and down stream process of typical microbial fermentation process.
- Students will be able to select industrially important microbes for economical use including protein products. Students will learn the economics of the fermentation for the total cost of production.

Course outcome:

- To understand the history, development of applications industrial important microorganisms.
- Student will up skill their practical knowledge to isolate and screen ideal industrially important microbes.
- To understand and design typical microbial fermentation process and economics.
- To acquire knowledge on microbial production industrial products for commercial applications.

Course objectives:

- To understand role of different cells and organs of immune system
- To gain knowledge on immunity and its significance
- To study concept of nature, types and role of antigens and immunoglobulins
- To train students to understand the concept of antigen-antibody reaction through various serological reactions.
- To understand the concept microbial pathogenicity and infections.
- To acquire knowledge on medical important pathogenic microbes and antimicrobial chemotherapy.

Course outcome:

- This Course acquaints students with the advanced concept of medical microbiology and its application
- Student will be motivated to plan and execute research work in the field of medical microbiology
- Student will trained to apply their theoretical and practical knowledge in diagnosis and chemotherapy

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	12.Physics BSCCBCSPHYCM

Program specific objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The course structure and detailed contents of the courses regarding the various components like the class room teaching (theory), laboratory (experiments), tutorials and industrial / field visits and projects can be designed and planned to achieve by the students.

Program specific outcome:

The Learning outcomes based curriculum framework in Physics should also allow for the flexibility and innovation in the program design of the UG education, and its syllabi development, teaching learning process and the assessment procedures of the learning outcomes. The process of learning is defined on the basis of final assessment of the program.

B.Sc., Physics

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	DSC IA: Mechanics, relativity and properties of matter.
2	II	DSC-II	DSC IB : Radiation, thermal physics and thermodynamics
3	III	DSC-III	DSC IC: Waves, sound and optics.
4	IV	DSC-IV	DSC ID: Electricity and electromagnetism.
5	V	DSE-IA	Atomic and molecular physics.
		DSE-IB	Nuclear Physics
7	VI	DSE-2A	Condensed matter Physics.
		DSE-2B	Electronics OR Astrophysics and solid-state physics

I Semester

Mechanics & Properties of Matter

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that its bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from first semester to second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the first semester, the students would have attained a common understanding in basic mechanics, properties of matter, Heat and thermodynamics. The students developed their experimental and data analysis skills through a wide range of experiments in the practical laboratories.

II Semester **Heat & Thermodynamics**

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the second semester, the students would have been introduced to powerful tools for tracking a wide range of topics in heat and thermodynamics become familiar with additional relevant Maxwell's formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses

III Semester **Waves, Acoustics, Optics and Scattering Of Light**

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the third semester, the students would have been introduced to powerful tools for tracking a wide range of topics in optics, acoustics and scattering of light become familiar with additional relevant Fourier's formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

III Semester **Dielectric Properties of Sound, Electricity and Electromagnetism**

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the fourth semester, the students would have been introduced to powerful tools for tracking a wide range of topics in dielectric properties of sound, electricity & electromagnetism become familiar with additional relevant Maxwell's formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

III Semester

Atomic and Molecular Physics

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the fifth semester, the students would have been introduced to powerful tools for tracking a wide range of topics in atomic Physics and structure of molecules become familiar with additional relevant Maxwell's formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

Nuclear Physics

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the fifth semester, the students would have been introduced to powerful tools for tracking a wide range of topics in fission and fusion, calculation of number of atoms become familiar with additional relevant Maxwell's formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

IV Semester

Condensed Matter Physics

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the sixth semester, the students would have been introduced to powerful tools for tracking a wide range of topics in condensed matter physics become familiar with additional relevant Maxwell's formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

Electronics**

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the pre university and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the sixth semester, the students would have been introduced to powerful tools for tracking a wide range of topics in electronics become familiar with additional relevant maxwells formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

Astrophysics and Solid-State Physics

Course objectives:

In this course, we aim to provide a solid foundation in various aspects of Physics, to show a broad spectrum of modern trends in Physics, to develop experimental and mathematical skills of students. The syllabi are framed in such a way that it bridges the gap between the Pre University and Post graduate levels of Physics, by providing a complete and more logical framework of basic Physics. The systematic and planned curricula from second semester shall motivate and encourage the students for pursuing higher studies in Physics, engage in research activities and become self-reliant.

Course outcome:

By the end of the sixth semester, the students would have been introduced to powerful tools for tracking a wide range of topics in heat and thermodynamics become familiar with additional relevant maxwells formulation. Further developed their experimental skills through a series of experiment which illustrates major themes of the lecture courses.

Sl No.	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	13.Sericulture BSCCBCSSERYCM

Program specific objectives (PSOs):

- To impart advanced and in-depth knowledge in the area of agriculture, animal husbandry and industry in general and sericulture in particular.
- To train the students to become progressive and innovative.
- To prepare the students for industry ready with basic and translational research skills with v technical excellence.

Program Specific outcomes (PSOs):

- In depth knowledge gained during the course of three years helps the students to quickly acclimatize to the work environment when they join as trainees or positions in public and private sector.
- Helps the students to face competitive exams in confidence for the masters as well as in civil service exams.
- Gain enough knowledge to propose research ideas in their higher studies.
- Develop practical skills along with their theory components, which helps in various positions selected in both academic institutions and R & D programs of industries.
- To develop entrepreneurial skills, with effective communication and interactive skills.

B.Sc., Sericulture

Sl No	Sem	Course	Title of the Paper
1	I	DSC-I	Sericultural Botany and Silkworm Biology
2	II	DSC-II	Mulberry Cultivation and Silkworm Rearing
3	III	DSC-III	Mulberry and Silkworm Crop Protection
4	IV	DSC-IV	Physiology of Mulberry and Silkworm
5	V	DSE-IA	Cytogenetics and Breeding of Mulberry and Silkworm
	(any 1)	DSE-IB	Silkworm Seed Technology
			Seribiotechnology
6	VI	DSE-2A	Silk Technology
	(any 1)	DSE-2B	Non Mulberry Sericulture, Sericulture Extension and Economics
			Applied Entomology

I Semester**Sericultural Botany and Silkworm Biology****Course objectives:**

- 1) To introduce the concepts of origin & growth of sericulture & study sericulture as an art, science and industry.
- 2) To acquaint with general aspects of sericulture industry and the organizational setup.
- 3) To introduce to the basic aspects of Mulberry plant and silkworm races/breeds.

Course outcome:

- 1) Gain the knowledge of origin and history of sericulture.
- 2) Will gain the knowledge of the organizations and industrial setup.
- 3) Will understand the classification and biology of mulberry and silkworm.

II Semester**Mulberry Cultivation and Silkworm Rearing****Course objectives:**

- 1) To understand the scientific approach of mulberry cultivation & production.

- 2) To acquaint with ecology and ethology of silkworm rearing.
- 3) To familiarize with improved technologies in mulberry cultivation and silkworm rearing & its impact on cocoon productivity.

Course outcome:

- 1) Students will gain the traditional and scientific approach of mulberry cultivation and production and silkworm rearing and production,
- 2) Make them industry ready by hands on training in practical classes and field exposure.
- 3) Acquires knowledge of improved technologies used and adopted in mulberry cultivation and silkworm rearing.

III Semester

Mulberry and Silkworm Crop Protection

Course objectives:

- 1) To study the incidence, symptoms & damage caused by different pests and diseases of mulberry.
- 2) To study the incidence, symptoms & damage caused by different pests and diseases of Silkworm.
- 3) To acquaint with the management of pests and diseases through different methods to prevent crop loss (cocoons).

Course outcome:

- 1) They gain the knowledge of disease incidences in mulberry to manage and avoid crop loss.
- 2) They also gain the knowledge of diseases of silkworm and to manage it.
- 3) They acquaint with the integrated management of pests and diseases through different methods to prevent crop loss (mulberry leaves and silkworm cocoons production).

IV Semester

Physiology of Mulberry and Silkworm

Course objectives:

- 1) To impart the in-depth knowledge of external and internal factors on mulberry and silkworm.
- 2) To study the physical and biochemical aspects of mulberry plant and requirements for good growth.
- 3) To study the physical and biochemical aspects of silkworm organ systems and their management.

Course outcome:

- 1) Students will gain the knowledge of importance of external and internal aspects of mulberry and silkworm.
- 2) Gain the importance of environmental factors and nutritional requirements in mulberry and silkworm crop production.
- 3) Understand the insect organ system functions and as well as in other systems also.

Cytogenetic and Breeding of Mulberry and Silkworm

Course objectives:

- 1) To gain the knowledge of germplasm bank, need of the present situations to protect, preserve and use the genetic resources.
- 2) To make the students understand the concept of reproduction and hereditary traits.
- 3) To familiarize with the basic principles and recent approaches in mulberry and silkworm genetics and breeding.

Course outcome:

- 1) Gain the knowledge on the importance of plant and animal species preservation and utilization in general and mulberry and silkworm in particular.
- 2) Understanding the importance of heredity in the expression of characters in offspring.
- 3) They acquaint with the concept of evolution of new mulberry varieties and silkworm races for increased productivity.

Silkworm Seed Technology

Course objectives:

1. To study the developmental biology of silkworm.
2. To study the silkworm seed organization and to practice the silkworm egg preparations.
2. To understand the importance of disinfection and hygiene in egg production.

Course outcome:

1. Gains the knowledge of embryo development and its organization.
2. Understand the organizational setup of silkworm egg production industry.
3. They familiarize with the disease-free silkworm egg production. practically, as it is the back bone of sericulture industry.

Seribiotechnology

Course objectives:

1. To introduce the students to understand the scope of plant biotechnology.
2. To familiarize the students to plant hybridization and techniques involved.
3. To import the knowledge in biotechnological tools.

Course outcome:

1. The students will understand the scope of biotechnology in plant improvement programme.
2. The students will familiarize with plant hybridization techniques.
3. Gain the knowledge in application of biotechnological tools in plant improvement programme.

VI SEMESTER
Silk Technology

Course objectives:

- 1) To introduce the concept of cocoon as raw material & its significance in reeling technology and to acquaint with the technologies of silk reeling & importance of reeling. devices as well as to understand the significance of raw silk production & processing of yarn.
- 2) To study non-mulberry sericulture as one of the occupations of millions of tribal people of north eastern India and its importance in protection of and development of forest resources.
- 3) To gain the knowledge of extension services.

Course outcome:

- 1) Students will expose to the hands-on training of silk reeling will help them to take up silk reeling as a profession if they wish.
- 2) Study of non-mulberry sericulture will motivate the students to protect and preserve the natural resources of our country for the wellbeing of the countryman.
- 3) Students will understand the importance of communication, leadership qualities and extension of education.

Non Mulberry Sericulture, Sericulture Extension and Economics

Course objectives:

- 1) To introduce the concept of cocoon as raw material & its significance in reeling technology and to acquaint with the technologies of silk reeling & importance of reeling. devices as well as to understand the significance of raw silk production & processing of yarn.
- 2) To study non-mulberry sericulture as one of the occupations of millions of tribal people of north eastern India and its importance in protection of and development of forest resources.
- 3) To gain the knowledge of extension services.

Course outcome:

- 1) Students will expose to the hands-on training of silk reeling will help them to take up silk reeling as a profession if they wish.
- 2) Study of non-mulberry sericulture will motivate the students to protect and preserve the natural resources of our country for the wellbeing of the countryman.
- 3) Students will understand the importance of communication, leadership qualities and extension of education.

Applied Entomology

Course objectives:

1. Aimed at understanding the types of beneficial/social insects.
2. To gain the knowledge of benefits of beneficial insects to humans.
3. To study the insect’s behaviour and their protection for the betterment of humans.

Course outcome:

1. Students will understand the types of beneficial/social insects.
2. They will gain the knowledge of benefits of beneficial insects.
3. Impart the knowledge of protection of beneficial insects for future use.

Sl No.	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	14.Statistics BSCCBCSSTAYCM

Program Specific objectives:

1. To prepare graduates who are not only statistically sound but also capable of using their appropriate statistical skills in interdisciplinary areas such as finance, health, agriculture, government, business, industry, telecommunication, and bio-statistics. As a result, they can pursue their future career either in the core field or in the applied field of Statistics.
2. To familiarize students with computational techniques and software used in the statistical arena.
3. To prepare students for undertaking further study.
4. To teach students to construct practical statistical models for several processes in the real-world.
5. To prepare the students to enrich with ability to examine basic statistical issues in a more logical and methodical manner. It is expected that the students will strengthen themselves both computationally and analytically.
6. Communication Skills and Team Work: The students are expected to develop effective and confident Communication skill after completion of the course. They will have an ability to work in a team as well as in isolation.

7. Moral and Ethical Awareness: After completion of the course, the students are expected to develop ethical and social responsibility as well. As a result, the students will be able to identify ethical issues, avoid unethical behavior such as fabrication, falsification or misrepresentation and misinterpretation of data.
8. Scientific Reasoning: The students will be able to analyze, interpret and draw appropriate conclusions from both quantitative and qualitative data and critically evaluate ideas, evidence and experiences with an unbiased and consistent approach.

Program specific outcomes:

1. Self-directed Learning: The students are expected to be familiar with data collection, compilation, analysis and interpretation and writing of project reports independently.
2. Demonstrate the ability to use skills in Statistics and different practicing areas for formulating and tackling Statistics related problems and identifying and applying appropriate principles and methodologies to solve a wide range of problems associated with Statistics.
3. Recognize the importance of statistical modeling and computing, and the role of approximation and mathematical approaches to analyze the real problems using various statistical tools.
4. Plan and execute Statistical experiments or investigations, analyze and interpret data/information collected using appropriate methods, including the use of appropriate statistical software including programming languages, and report accurately the findings of the experiment/investigations.
5. The students are expected to be familiar ICT skills
6. The students are prepared for personal skills such as the ability to work both independently and in a group.

B.Sc., Statistics

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Basic Statistics-1
2	II	DSC-II	Basic Statistics- II
3	III	DSC-III	Probability Distributions and R-Language
4	IV	DSC-IV	Statistical Inference
5	V	DSE-IA	Applied Statistics-1
			Sampling Techniques and Design of Experiments
		DSE-IB	Applied Statistics-II
			Operations Research
SEC-2	Statistical-Data Analysis Using Software Packages		
6	VI	DSE-2A	Financial Statistics
			Actuarial Statistics
		DSE-2B	Survival Analysis & Biostatistics
			Project Work
		SEC-4	Statistical Data Analysis Using R

Basic Statistics-1

Course objectives:

1. To introduce the students to new field/subject Statistics, and understand the types of data, identification, and their segregation.
2. To develop the ability in organizing, classifying and presenting the data using various forms of tables, diagrams, graphs, charts and plots especially used in the field of statistics.
3. To develop the ability in students to deal Statistical methods, Probability and its applications in various applied fields.
4. To introduce the students into various applied fields of statistics like Biometry, Econometrics, Demography, Engineering, Medicine, Agriculture, Social sciences etc.

Course outcome:

1. Students will gain knowledge regarding theoretical aspects and practical approach in statistical methods like measures of central tendency, dispersion, Skewness, probability and its applications.
2. The theory and practical of sample or population survey, data collection methods creates a strong foundation in students, which enhances and prepares them in conducting a research survey even in other curriculum aspects.
3. Statistical survey methods and sampling methods majorly helps students in conducting research activities in the field of agriculture, forest etc., and it helps them in successfully understand the other methods and techniques of the subject to be taught in the coming semesters.
4. The knowledge of probability gained here prepares the student for advance studies/concepts of statistics like inferential statistics, Bayesian statistics, and their application.
5. Knowledge and experience gained here can be used in handling data efficiently, which arises from any field and students could develop a career in any of the applied field easily.

Basic Statistics-II

Course objectives:

1. Students will gain knowledge regarding theoretical aspects and practical approach in statistical methods like, correlation, regression, and their applications.

2. To develop the ability in students to deal and understand the types of random variable and their properties.
3. To introduce the students to vast field of random variables and discrete probability distributions, in studying real life situations/practical problems.
4. The practical classes help to introduce them into various real life problems which could be dealt using random variable and probability techniques.
5. To understand and enable the use of statistical tools and techniques available to deal with univariate and bivariate random variables.

Course outcome:

1. Students will gain knowledge regarding theoretical and practical approach to discrete random variables (RVs), PMF, sketching of probability distribution and density functions, expectation and variance of RVs, Joint PMF, marginal and conditional probabilities, correlation coefficient of random variables and their applications.
2. Knowledge of Binomial, Poisson etc., probability helps in successfully understanding methods and techniques which will develop ability in students to understand and solve real life problems.
3. The knowledge of probability and random variable gained here prepares the student for advance studies/concepts of statistics like inferential statistics, Bayesian statistics, and their applications.
4. The tools and techniques collectively learnt from I and II semester helps a student to enter into a field of data science, IT etc to successfully build career.

III Semester
Continuous Probability and Sampling Distributions

Course objectives:

1. To introduce the students to vast field of continuous random variables and continuous probability distributions such as normal, exponential, etc., in studying real life situations/practical problems.
2. To introduce the concept of transformation of RV's into various probability functions which could help in modeling real world problems.
3. To introduce the concept of sampling distributions, the shape, center, and spread of sampling distributions of sample statistics.
4. To Understand the need for t, χ^2 , and F distributions, similarities, relation and differences between sampling distributions with the standard normal distribution.

5. To get knowledge of R- language and its use in research/project.
6. To develop knowledge of statistics in students through an in-depth research/project experience/ real world models.

Course outcome:

1. Students will gain knowledge regarding theoretical and practical approach to discrete random variables (RVs), PMF, sketching of probability distribution and density functions.
2. Expectation and variance of RVs, Joint PMF, marginal and conditional probabilities, correlation coefficient of random variables and their applications.
3. Students will be able to apply transformation of RV's in modeling real world problems.
4. Students will be able to generate sampling distributions of means to observe, empirically.
5. Students will be able to describe the distributions of various statistics like , t, χ^2 & F.
6. Students will be able to determine the mean and standard deviation of a sampling distribution of means, t, χ^2 and F.
7. Students will be able to understand how the degrees of freedom determines the shape of a sampling distribution.
8. Ability to apply R language in the field of real data analysis

III Semester

Statistical Inference

Course objectives:

1. To introduce the concept of Limit Theorems, central limit theorems.
2. To develop the knowledge and importance of inferential statistics.
3. To enhance the knowledge of estimation of parameters.
4. To enable the use of parametric and nonparametric inferential statistics

Course outcome: Having successfully completed this module, students will be able to:

1. Recognize situations in which the CLT does/does not apply; Use the Central Limit Theorem in approximating distributions of sample means; Interpret law of large numbers and central limit theorem.
2. Learn the basic theory and techniques of estimation of parameters, namely, unbiasedness, consistency, MLE, MME etc.
3. A good understanding of basic theory and techniques of tests of hypotheses, likelihood ratio tests and their applications.
4. Get the knowledge of applying large and small sample tests to real life problems.
5. Knowledge of applying parametric and nonparametric test to a data.

Course objectives:

1. To introduce the students to vast field of continuous random variables and continuous probability distributions such as normal, exponential, etc., in studying real life situations/practical problems.
2. To introduce the concept of transformation of RV's into various probability functions which could help in modeling real world problems.
3. To introduce the concept of sampling distributions, the shape, center, and spread of sampling distributions of sample statistics.
4. To Understand the need for t, χ^2 , and F distributions, similarities, relation and differences between sampling distributions with the standard normal distribution.
5. To get knowledge of R- language and its use in research/project.
6. To develop knowledge of statistics in students through an in-depth research/project experience/real world models.

Course outcome:

1. Students will gain knowledge regarding theoretical and practical approach to discrete random variables (RVs), PMF, sketching of probability distribution and density functions.
2. Expectation and variance of RVs, Joint PMF, marginal and conditional probabilities, correlation coefficient of random variables and their applications.
3. Students will be able to apply transformation of RV's in modeling real world problems.
4. Students will be able to generate sampling distributions of means to observe, empirically.
5. Students will be able to describe the distributions of various statistics like, t, χ^2 & F.
6. Students will be able to determine the mean and standard deviation of a sampling distribution of means, t, χ^2 and F.
7. Students will be able to understand how the degrees of freedom determines the shape of a sampling distribution.
8. Ability to apply R language in the field of real data analysis

III Semester **Applied Statistics-1**

Course objectives:

1. To understand the concepts, formulation and application of index numbers in different economic and business situations.
1. To learn and develop scientific view to understand the time series data and its analysis and to estimate model parameters and compare models in terms of their estimation and prediction accuracy.
2. To identify appropriate source of data and to perform basic demographic analysis using various techniques across population and learn to measure theories used to understand population studies.
3. To learn and develop scientific view to study the statistical challenges of clinical comparison of two or more treatments in human subjects.

Course outcome:

1. Students gain knowledge/ability to formulate, analyse the use of index numbers to the real world problems and to calculate an indices from a given data.
2. Knowledge of time series and its components helps in measuring variations in the data and making predictions through graphical representation.
3. Students should have developed a clear understanding of vital statistics, collection of data using different sources, basic measures of mortality, fertility and population growth, concept of stable and stationary population and describes the concept of life table.
4. Ability in students to understand need and ethics of clinical trials and to apply designs of clinical trials and drug interaction study.

Sampling Techniques and Design Of Experiments

Course objectives:

1. To estimate population parameters from a sample.
2. To find out the degree of reliability of the estimate.
3. To analyse when more than two samples are to be tested at a time on the basis of equality of several means.
4. Providing an understanding of interactions among contributory factors.
5. Minimizing experimental error.

Course outcome: Having successfully completed this module, students will be able to:

1. Apply various types of sampling methods, such as simple random sample, stratified random sample and systematic sample for some real life problems.
2. Knowledge of drawing a sample using with/without replacement.
3. Compute sample size using proportional allocation, optimum allocation, systematic sample procedures.
4. To make generalisation about the population/universe from the studies based on samples drawn from it.
5. Knowledge of applying of Designs of experiments such as CRD, RBD, LSD and factorial experiments.
6. Understand theoretical knowledge of estimation of missing values, efficiency.
7. Knowledge of estimation of parameters, like unbiasedness of sample mean, sample variance, mean sum of squares due to error, treatment, total, block etc.
8. Knowledge of factors, levels, blocking.
9. Knowledge of analysing data on Agriculture, Biology, Statistics, Marketing, etc.

Applied Statistics -2

Course objectives:

1. To introduce the role of statistics in all manufacturing firms.
2. To provide knowledge to the students about statistical quality control.
3. To introduce seven basic quality tools for quality improvement.
4. To introduce control chart as a tool for studying the variability of a system for managers to determine how to improve a process/system.
5. To introduce the tools of product control in manufacturing system.
6. To provide knowledge to the students about reliability and basic concepts and applications.
7. To provide knowledge of demand and supply of commodities, market equilibrium etc.

Course outcome: On successful completion of this course the students will be able to:

1. Describe the various charts in SQC.
2. Interpretation of these charts in real life situations.
3. Understand the concept of product control.
4. Understand single and double sampling inspection plans, OC and ASN functions.
5. To understand reliability and basic concepts and applications.
6. To be able to understand the variations occurring in demand and supply of commodities, market study etc.

Operations Research (O.R)

Course objectives:

1. To introduce the students to different OR models and their importance.
2. Formulate and solve LPP, Assignment problems, Transportation problems. Inventory problems game theory, CPM & PERT.
3. To introduce the tools of product control in manufacturing system

Course outcome: On successful completion of this course the students will be able to

1. Will be able to Formulate and solve LPP, Assignment problems, Transportation problems, game theory, CPM & PERT.
2. Understand the concepts in inventory and build basic inventory models indifferent conditions.
3. To understand and solve problems on game theory

IV Semester **Financial Statistics**

Course objectives:

1. Provides an introduction to financial mathematics and basic statistics within a financial context.
2. It will assist students to gain an appreciation of what statistical methods can achieve, as well as skills in analysing and interpreting business data and statistical analysis.
3. To prepare the students on data science as an analytical and decision making tool, in a variety of business contexts, with a major emphasis on interpretation and application.

Course outcome: Students who successfully complete this unit will be able to:

1. Identify and apply commonly used techniques for data collection and analysis.
2. Apply fundamental concepts of probability and probability distributions to problems in business decision-making.
3. Apply statistical inference methods to conduct and explain the results of hypothesis testing.
4. Apply simple regression analysis to explain the relationship between variables to draw inferences about relationships.

Actuarial Statistics

Course objectives:

To provide grounding in mathematical and statistical techniques that are of particular relevance to actuarial statistics.

Course outcome: On successful completion of this subject, a student will be able to:

1. Describes the essential features of statistical distributions, Utility theory.
2. Understand, interpret and discuss the theories on Premium Calculation.
3. Describes Survival Distribution and Life Tables.
4. Describe, interpret and discuss mathematical techniques used to model and value cash flows which are contingent on mortality and morbidity risks.

Survival Analysis and Biostatistics

Course objectives:

The course will focus on the basic concepts of survival (time-to-event) data analysis. The course objectives are to:

1. Recognize when it is necessary to account for time in the analysis of yes/no outcomes
2. Learn different types of censoring, and their characteristics.
3. Study different survival distributions and their applications
4. Study Competing Risk Theory, Stochastic Epidemic Models and Statistical Genetics

Course outcome:

1. Learn to appropriately summarize time-to-event data
2. Understand different types of censoring, and learn to estimate and interpret survival characteristics
3. To understand different survival distributions and their applications
4. To understand various methods of Competing Risk Theory, Stochastic Epidemic Models and Statistical Genetics.

Skill Enhancement Elective

Statistical Data Analysis Using R

Course objectives: As the name suggests, this course on Statistical Data Analysis using R software for implementation and students are trained on several practical problems in this course to equip them to think independently and for analysis of statistical data. After finishing this course, one can write R codes for statistical methods and implement R codes for the various methods learnt in the B.Sc. Program.

Course outcome: A person successfully completing the Course will acquire practical knowledge of solving problems and proof techniques in several topics in Statistical Data Analysis Using R by writing R codes, visualization and running R packages are part of the Course.

Sl. No.	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	15.Zoology BSCCBCSZOOYCM

B.Sc., Zoology

Sl. No	Sem	Course	Title of the Paper
1	I	DSC-I	Animal diversity-I
2	II	DSC-II	Animal diversity -II
3	III	DSC-III	Animal diversity -III
4	IV	DSC-IV	Biochemistry, physiology and Ethology
5	V	DSE-IA	Cell & Molecular Biology
		DSE-IB	Genetics and Evolution
6	VI	DSE-2A	Developmental Biology and Endocrinology
		DSE-2B	Environmental biology, Zoogeography and applied Biology

I Semester

Animal Diversity - I

Course objectives:

1. Study starts with the concept of biodiversity and its importance as well as system of classification and nomenclature of animals
2. Learning about invertebrates elaborates different group of animals from protozoa to Annelida with various examples according to the coelom
3. Importance will be given to type study in each phylum along with the example in the theory paper
4. In practical students will study the concept of invertebrates with the hands of experience by observing and mounting the protozoa and setae of the earthworm

Course outcome:

1. After completing this course, the students will be able to know the basic concepts of animal taxonomy and zoological nomenclature, how to identify the species its significance students will be able to develop an understanding of the basic characters used for classification from the kingdom to species level.
2. They have hands on experience of materials demonstrating the diversity of protists and non-chordates
3. Students are able to analyze different animals from their habitat to their reproduction. It will be further enable the students to think and interpret individually and helps to undertake research in any aspect of animal taxonomy in future

II Semester

Animal Diversity - II

Course objectives:

1. Students will study unique characters of phylum Onychophora to Cyclostomata
2. Students will learn the connecting link between the animals from different phyla
3. In practicals each individual will undergo the field study to observe the insects
4. Observation and recording of Arthropods in nature (Minimum ten species).
5. Identification of insects according to the order by using the appropriate key
6. Identification of pest in agricultural and household
7. Identification of the different species of Mosquitoes as vectors

Course outcome:

1. After completing this course, the students will be able to get the basic concepts of Onychophora to Cyclostomata & Protochordates that helps to evaluate the significance of museum specimens.
2. Further, the students will also be able to develop an understanding of the evolution of vertebrates with integrating structure, function and development in brain, aortic arches, kidneys.
3. It will help to undertake research in any aspect of invertebrates and protochordates especially in the field of entomology vertebrates in future
4. Students are able to understand the various pest and its types and also causes
5. Students are enable to understood the pathogens which are transmitted by the Mosquitoes and their mouth parts
6. Students are able to understand the habit of the insects and their identification.

III Semester

Animal Diversity - III

Course objectives:

1. To understand what the general characters of vertebrates from fishes to mammals and their adaptations
2. Students will learn the dentition of different categories of the animals
3. To understand the various groups animals (Externals, Digestive system, Respiratory system, Nervous system, Urinogenital system).
4. Students should be taken outside to watch the birds using some protocol
5. Study of Oseotology using different vertebrate system form Fishes to mammals

Course outcome:

1. Student should be able to recognize life functions of Fishes to Mammals.
2. To understand the ecological role of different groups of chordates.
3. Students are able to assess the diversity of birds and their adaptations.
4. Field trip for analyzing the bird movements and their habitats will help the students to in wild life research.
5. Students are able to understand the structure of bones and their functions in vertebrates.

IV Semester**Biochemistry, physiology and Ethology****Course objectives:**

1. To provide a glimpse of Aims and scopes of physiology and biochemistry to the students.
2. To impart knowledge regarding structure and functions of nerve and muscle to the students.
3. To develop detailed understanding of mechanism of digestion, respiration and excretion.
4. To provide knowledge about reproductive system as well as endocrine glands and their mechanism of action.
5. To give adequate information to the students regarding Metabolism of macromolecules such as carbohydrates, lipid and protein.
6. To make the students gain knowledge about enzyme functions, regulation and their mechanism of action as well.
7. In practicals prominence was given to the test for some of qualitative test to the biochemical's aspects and demonstrating experiments are done example Gel electrophoresis

Course outcome:

1. Students are able to understand the Physiology of Digestion & Respiration.
2. Students understood the Physiology of Circulation & nerve impulse and Reflex Action.
3. Students gain the knowledge of Physiology of muscle contraction & Excretion
4. Students learned about Physiology & Types of Endocrine glands.
5. Structure, function, significance and Metabolism of Carbohydrates, Proteins and Lipid will be elaborately studied.
6. Students will learn how to identify the blood groups and the Haemoglobin content in the blood samples
7. Students will come out with technique of DNA extraction by gel electrophoresis

V Semester**Cell and Molecular biology****Course objectives:**

1. Students examine the basic properties of cells and cell organelles, in addition to the properties of differentiated cell systems and tissues.
2. The course aims to equip students with a basic knowledge of the structural and functional properties of cells.

3. Students will understand how these cellular components are used to generate and utilize energy in cells.
4. Students will understand the cellular components underlying mitotic cell division.

Course outcome:

1. After completion of this course, students will be able to: Identify the macromolecules, their monomers, and their functions in cells.
2. Students are able to describe the structures and functions of cell organelles.
3. Students are able to discuss energy transfer, enzyme function and the pathways of cellular respiration.
4. Students can differentiate prokaryotic binary fission, the eukaryotic cell cycle, mitosis and meiosis.
5. Students are able to understand the DNA structure and replication, transcription, translation and gene expression.
6. Students are able to know the modern biotechnological techniques and their importance in various fields of science.

Genetics and Evolution

Course objectives:

1. Students will study the Mendelian principles and classical genetic aspects and some part of cytology
2. The aim of the course is to provide students with a deeper insight into the evolutionary processes.
3. both selective and random - which can explain the genetic composition of populations, form, behavior and distribution of organisms.
4. To teach students the basic methods of analyzing the evolutionary relationships between the organisms
5. Study of organic evolution and adaptations
6. Study of speciation
7. The above points are observed in the practical class along with the hands of experience.

Course outcome:

1. Solve problems in Mendelian genetics, including multiple alleles and X-linkage along with the Laws of Segregation and Independent Assortment
2. Describe the structure and replication of the genetic material and basic aspects of the flow of genetic information from DNA to proteins.
3. Apply knowledge about transcription, translation and the genetic code to demonstrate an understanding of the flow of genetic information from DNA to proteins students can describe some of the processes involved in the regulation of gene expression
4. Explain fundamental genetic concepts. Describe the phases of mitosis and meiotic in detail and

- explain the connection between chromosomal behavior in meiosis.
5. Apply the principles of Mendelian inheritance and their extensions (one- and two-locus traits with two or more alleles, gene interactions, sex linkage and linkage) by analyzing inheritance patterns from crosses
 6. Describe the origins and genetic consequences of mutations and chromosomal abnormalities
 7. Analyze allele and genotype frequencies within populations from the Hardy-Weinberg
 8. Analyze basic processes in population genetics, mutation, migration, natural selection, sexual selection and genetic drift and describe how they affect the genetic diversity within a species
- Discuss methods for detecting and analyzing variation at gene, genome and phenotypic levels within and between individuals, populations and species.
- Describe the relationship between molecular and phenotypic evolution.

VI Semester

Developmental Biology and Endocrinology

Course objectives:

1. The objectives of the course is to develop knowledge of early embryonic development in humans and the important role played by different hormones during various developmental stages under physiological and pathological conditions.
2. Study of various aspects of reproduction and fertilization in higher animals
3. In practical contraceptive devices for the family planning will be studied
4. Study of the preparation of the permanent histological slides using the microtome technique
5. Studies on demography was also taught and its consequences are discuss in the Practical paper

Course outcome:

1. Upon successful completion of this course, students should be able to understand the processes of spermatogenesis, oogenesis, fertilization etc.,
2. They can also able to understanding of the hormonal control of reproduction in males and females with regulations.
3. They critically assess relevant scientific literature in modern Human Reproductive biology with recent developed assisted reproductive technologies viz; Test tube baby, -ZIFT, GIFT, ICSI, IVF, ET. They can also able to understand detail account on Family planning in India.
4. Students can understand the use of the contraceptive devices and what is family planning methods
5. Students can prepare there own permanent histological slides which should be submitted during the exam by procuring the section by the microtomy.
6. Students can understand the consequences of the population explosion and its impact in the society and environment

Environmental Biology, Zoogeography and Applied Biology

Course objectives:

1. Creating the awareness about environmental problems among people.
2. Imparting basic knowledge about the environment and its allied problems.
3. Developing an attitude of concern for the environment.
4. Students will study how to assess the pollutants in water samples

5. Students are able understand the local varieties of the edible fishes
6. Zoogeography aims to explain the structure, function and history of the geographical ranges of animals. The absence or presence of a species in a given place has ecological as well as historical causes.
7. The Applied Biology Programme is designed to equip the students with the practical uses of biological knowledge and to inculcate in the students an entrepreneurial and problem-solving ability.
8. Field trip is to be conducted by the college to know the fauna and its habitat in the nature
9. Study of the Food chain and the animals in the wild locality.

Course outcome:

1. After completing this course, the students will be able to: 1. Acquire an in-depth knowledge on the diversity and relationships in animal world. Develop a holistic appreciation on the phylogeny and adaptations in animals.
2. Enable the students to understand the evolution of universe and life. Understanding on the process and theories in evolutionary biology.
3. Develop an interest in the debates and discussion taking place in the field of evolutionary biology by visiting the lake available in and around localities.
 1. The students will also be able to know the evolutionary and functional basis of animal ecology. Develop an understanding of how animals interact with each other and their natural environment. Studies engage in field-based research activities to understand well the theoretical aspects, taught besides learning techniques for gathering data in the field.
 2. Analyze a biological problem, derive testable hypotheses and then design experiments and put the tests into practice. When they visit to field to study the wild life
 3. Solve the environmental problems involving interaction of humans and natural systems at local or global level.
 4. The course is an introduction to wildlife management and gives an account of the tools used by wildlife managers. Topics covered are to equip students with adequate knowledge of various biodiversity monitoring methodologies, conservation and management issues of vertebrate pests, wildlife conflict and over abundant species, wildlife health and diseases.
 5. From the field trip for national park and bird sanctuary students can learn the subject behind the class room level. They can able to learn the concepts very clearly as much as possible by acquiring the skills
 6. Students are able to understand the rules and regulations in the national park which was regulated by the both State and Government of India.

Sl. No	Program	Program Code	No of Program specific disciplines with code
1	B.Sc.	BSCCBCSYCM	AECC <u>Language disciplines: Compulsory (One):</u> 1(a)English, BSCCBCSENGYCM

ENGLISH LANGUAGE- PROGRAMME SPECIFIC OBJECTIVES

- To enable the learner to communicate effectively and appropriately in real life situations;
- To impact the use of English effectively for various purposes across the curriculum;
- To develop interest in the appreciation of Literature;
- To develop and integrate the use of the four language skills i.e. Reading, Listening, Speaking and Writing.

B.Sc. (Language Course): Ability Enhancement Compulsory Course (AECC): English

Sl. No	Sem	Course	Title of the Paper
1	I	AECC	English I
2	II	AECC	English II
3	III	AECC	English III
4	IV	AECC	English IV

ENGLISH LANGUAGE- PROGRAMME SPECIFIC OBJECTIVES

- To enable the learner to communicate effectively and appropriately in real life situations;
- To impact the use of English effectively for various purposes across the curriculum;
- To develop interest in the appreciation of Literature;
- To develop and integrate the use of the four language skills i.e. Reading, Listening, Speaking and Writing.

I Semester: B.Sc/BBA/BCA

AECC: Title of the Course: English I

Course objectives:

- To introduce basic grammar through ample practice exercises for effective language learning
- To teach to use vocabulary appropriately and grammatical structures correctly
- To adopt strategies for developing effective reading and listening skills while engaging students in using correct pronunciation
- To instil confidence and develop competence in students in order to communicate in grammatically correct English.

Course outcome:

- Students will be able to enrich their vocabulary and enhance their comprehension skills.
- They will acquire grammatical competence and communicative skill which in turn will improve their command over English
- Students will acquire greater fluency in English which is an important dimension of language learning.

II Semester: B.Sc/BBA/BCA**AECC: Title of the Course: English II****Course objectives:**

- To introduce basic grammar through ample practice exercises for effective language learning
- To teach to use vocabulary appropriately and grammatical structures correctly
- To adopt strategies for developing effective reading and listening skills while engaging students in using correct pronunciation
- To instill confidence and develop competence in students in order to communicate in grammatically correct English.

Course outcome:

- Students will be able to enrich their vocabulary and enhance their comprehension skills.
- They will acquire grammatical competence and communicative skill which in turn will improve their command over English
- Students will acquire greater fluency in English which is an important dimension of language learning.

III Semester: B.Sc/BBA/BCA**AECC: Title of the Course: English III****Course objectives:**

- Teaching explicitly the structures and grammatical features of spoken and written texts
- Providing students with guided practice in writing as they develop language skills for meaningful communication
- Set some language-focussed tasks to enable students to acquire critical thinking
- Creating scope in the classroom for meaningful and purposeful interaction through language

Course outcome:

- Students' engagement with various strategies of writing and revising like paragraph writing, correction of sentences, essay writing and use of language as a means of creative expression will make them confident communicators .

- Students, in acquiring the skill to use language to recreate experience, will be able to order their experiences into meaningful narratives and thus would be prepared for real-world uses of language.
- Since communicative competence is a prerequisite for success and advancement in many fields of employment in today's world, this course will immensely benefit the students in their future endeavours.

IV Semester: B.Sc/BBA/BCA

AECC: Title of the Course: English IV

Course objectives:

- Teaching explicitly the structures and grammatical features of spoken and written texts
- Providing students with guided practice in writing as they develop language skills for meaningful communication
- Set some language-focussed tasks to enable students to acquire critical thinking
- Creating scope in the classroom for meaningful and purposeful interaction through language

Course outcome:

- Students' engagement with various strategies of writing like paragraph writing, précis writing, comprehension passages and use of language as a means of creative expression will make them confident communicators .
- Students, in acquiring the skill to use language to recreate experience, will be able to order their experiences into meaningful narratives and thus would be prepared for real-world uses of language.
- Since communicative competence is a prerequisite for success and advancement in many fields of employment in today's world, this course will immensely benefit the students in their future endeavours.

Program specific objectives and outcome

Sanskrit is very ancient language in the world. It is Sanskrit because it has Samskaara or culture. Each word of Sanskrit can be derived with Grammatical Rule. This is a Divine Language. This is not a reason to give the importance for Sanskrit. But Sanskrit has everything. It means, Whole ancient Indian literature is kept in Sanskrit Language. Four Vedas named Rugveda, Yajurveda, Saamaveda and Atharvaveda, Four Upavedas named Aayurveda, Dhanurveda, Gaandharvaveda and Arthaveda, Six parts of Veda named Shikshaa, Vyaakarana, Chandas, Nirukta, Jyothishya and Kalpa, Eighteen Puraanas, Twelve Darshanas or Six important Darshanas, Political Science, Law and Punishment, Natya-Shastra means Dance, Drama, Music, Musical Instruments, Shilpa Shastra means any art or craft on wood or stone, Vaastu is Architecture, Ramayana, Mahabharatha and Poetry - these all are composed in Sanskrit. So, Sanskrit is very rich language by it's collection of ancient Indian literature. If anybody likes to know something in ancient Indian literature, he must have the knowledge about Sanskrit language. Translation gives only outlook. Necessity of Sanskrit is everywhere to have great depth or inner mind in related subject. Simply we can say that Yoga, Ayurveda the ancient medical theory, Natya the ancient theory of Music, Dance, Drama, Musical Instruments, all are explained in Sanskrit. So, everybody or every Indian have to study the divine language to enjoy the ancient science of India.

Another derivation can be told that Samskruthi is culture and Samskrutha is language. The language which has culture is called Sanskrit. So, culture and Sanskrit language, both are faces of a coin. Learning Sanskrit creates good culture and humanity in students. Other advantages of Sanskrit are Good pronunciation, Increase of memory power and Peace of mind. Sanskrit is mother tongue of all Indian languages. This is the reason that learning Sanskrit helps to study any Indian language easily. So, we are requesting all of you to learn Sanskrit to enjoy the great knowledge of ancient India.

B.Sc. (Language Course): Ability Enhancement Compulsory Course: Sanskrit Language

IV Semester

First Canto from Raghu-Vamsham of Kalidasa is selected as text for second semester. Singing the verses, Composing the verses, Composing the sentences from verses and Metre of the verses are practiced here.

V Semester

First Canto from Raghu-Vamsham of Kalidasa is selected as text for second semester. Singing the verses, Composing the verses, Composing the sentences from verses and Metre of the verses are practiced here.

VI Semester

"Champoo" a kind of poetry which is mixed with prose and verses. But Champoo is Extraordinary text, it makes more fluency and beauty (attraction) in the language. So, Champoo is given for last semester (4th semester).

* General (common) Subjects: Forms of the nouns and verbs, Sandhi (conjunction between words), Samasa (Compounds) and Figures of Speech are common in all semesters. It cannot be explained the advantage of each portion of Sanskrit, however the beauty of a hill cannot be pointed at a place. But each part of a hill makes the hill beautiful.

Sl.	Program	Program Code	No of Program specific disciplines with code
1	B. Sc	BSCCBCSYCM	<u>Optional any one (Nine):</u> 4(e) Malayalam, BSCCBCSTAMYCM 5(f) Persian, BSCCBCSPERYCM 6(g) Tamil, BSCCBCSARAYCM 7(h) French, BSCCBCSFREYCM 8(i) Arabic, BSCCBCSARAYCM 9(j) Malayalam, BSCCBCSMALYCM This is included as one of the four ability Enhancement compulsory courses

The objectives and outcomes of the above Modern Indian Languages:

The above language option is given to students of under graduate to choose the one which they wish to pursue with selfstudy. Hence during the course of self-study, they will build up language skills which will help them as added advantage for their profession to speak local languages with better knowledge of the language.

Sl. No	Program	Program Code	Compulsory Course
1	B.Sc	BSCYCM	1(k) Environmental Studies, BSCENSYCM

The objectives and outcome of Environmental Studies

Course objectives:

- To understand the multidisciplinary nature of natural resources their associated problems.
- To develop the concept of conservation of biodiversity and ecosystems for future generations.

Course outcome:

- Students will understand the uses and exploitation of various natural resources like forest, water, minerals food and energy, along with case studies to preserve and sustain our environment.
- It will enable them to understand the concept and types of ecosystems.
- Conservation of biodiversity, endangered, endemic species are studied at global, national and local levels.
- Help the students to understand the causes, effects and control measures of various environmental pollution also by taking into account the social issues associated with it.

Sl. No	Program	Program Code	Compulsory Course
1	B.Sc	BSCYCM	Indian Constitution , BSCINCYCM

Course objectives:

- To understand the fundamental rights and duties as being citizen of India
- To know the entire outline of our federal structure
- To develop the belongingness to our country and be patriotic

Course outcome:

- Students become aware of the fundamental rights and meantime become responsible towards the duties as being citizen of India
- The knowledge of federal structure after completion of the course helps them to know the depth of governing structure of our country which always supports justice to everyone equally.
- Our students become patriotic.

Sl. No	Program	Program Code	Compulsory Course
1	B.Sc	BSCYCM	Computer Application

Course objectives:

- To make the students digitally educated
- To make the students technology oriented

Course outcome:

- Students become equipped with digital knowledge which is the need of the hour.
- This equips the students of all courses in a digital technology driven direction and gives a common platform for all students of our college.

2BCA8	Accountancy Lab	Com.

III Semester

Subject code	Title	Teaching Dept.
3BCA1	Kannada / Other Language-III	Kannada/ Concerned Dept.
3BCA2	English Language	English
3BCA3	Operating Systems	CS
3BCA4	System Analysis & Design	CS
3BCA5	Microprocessors	CS
3BCA6	Object Oriented Programming with C++	CS
3BCA7	Microprocessor Lab	CS
3BCA8	Object Oriented Programming Lab	CS

IV Semester

Subject code	Title	Teaching Dept.
4BCA1	Kannada / Other Languages-IV	Kannada/ Concerned Dept.
4BCA2	English IV	English
4BCA3	Numerical Analysis and Statistics	CS/Math.
4BCA4	Database Management Systems	CS
4BCA5	Computer Networks	CS
4BCA6	Dot Net Programming	CS
4BCA7	Numerical Analysis and Statistics Lab	CS
4BCA8	Database & Visual Basic Lab	CS

V Semester

Subject code	Title	Teaching Dept.
5BCA1	Constitution of India *	Concerned Dept.
5BCA2	Environmental Studies *	Concerned Dept.
5BCA3	Software Engineering	CS
5BCA4	Java & Web Designing	CS
5BCA5	Elective – I	CS

5BCA6	Elective – II	CS
5BCA7	Web Designing Lab	CS
5BCA8	Elective Lab	CS

VI Semester

Subject Code	Title	Teaching
BCA1	Project Work	CS
		Total

I Semester

Analog and Digital Electronics

Course objectives:

- The concept of various components.
- The concepts that underpin the disciplines of analog and digital electronic logic circuits.
- Various Number system and Boolean algebra.
- Design and implementation of combinational circuits.
- Design and implementation of sequential circuits

Course outcome: Students will able to:

- Understand the concepts of various components to design stable analog circuits.
- Represent numbers and perform arithmetic operations.
- Minimize the Boolean expression using Boolean algebra and design it using logic gates.
- Analyze and design combinational circuit
- Design and develop sequential circuits.

Mathematics

Course objectives: Students will try to learn:

- The concepts of Set theory and Relation.
- The concepts of Functions and define the recursive functions.
- The concept of Laplace transforms.
- The concept of Inverse Laplace transforms.
- The concept of permutations and combinations.
- The concept of variable and also identify the mapping

Course outcome: Students will be able to:

- Apply the Set theory and Relation concepts.
- Apply the Functions and define the recursive functions.
- Apply Laplace transform to different applications
- Apply Inverse Laplace transform to different applications.
- Identify the permutations and combinations.
- Define variable and also identify the mapping.

Fundamental of Information Technology

Course objectives: Students will try to learn:

- IT in a simple language to all undergraduate students, regardless of their specialization.
- It will help them to pursue specialized programs leading to technical and professional careers and certifications in the IT industry.
- Skills relating to IT basics, computer applications, programming, interactive medias, Internet basics etc.

Course outcome: Students will be able to:

- Understand basic concepts and terminology of information technology.
- Have a basic understanding of personal computers and their operations.
- Be able to identify issues related to information security.

Information Technology Lab

Course objectives: Students will try to learn:

- To expose to the field of computers and their basic applications such as word-processing, spreadsheet and presentations.

Course outcome: Students will be able to:

- Understand the basic organization, working and applications of personal computers.
- Apply the different tools and utilities of the operating system.
- Create, edit, spread-sheet and present documents using the relevant application software.
- Analyze the data using spread sheet.

Problem Solving and Programming in C

Course objectives: Students will try to learn:

- To make the student learn a programming language.
- To develop logics, this will help them to create programs, applications in C.
- To learn problem solving techniques.
- Also learn the basic programming constructs they can easily switch over to any other language in future.

Course outcome: Students will be able to:

- Analyze a given problem and develop an algorithm to solve the problem
- Improve upon a solution to a problem
- Use the 'C' language constructs in the right way
- Design, develop and test programs written in 'C'
- Use different data types in a computer program.
- Design programs involving decision structures, loops and functions.
- Understand the dynamics of memory by the use of pointers and Structures.

C Programming Lab

Course objectives: Students will try to learn

- A programming language.
- Problem solving techniques.
- How to write programs in C and to solve the problems.

Course outcome: Students will be able to:

- Demonstrate use of data types, simple operators (expressions)
- Demonstrate decision making statements (if and if-else, nested structures)
- Demonstrate decision making statements (switch case)
- Demonstrate use of simple loops
- Demonstrate use of nested loops
- Demonstrate menu driven programs and use of standard library functions.
- Demonstrate writing c programs in modular way (use of user defined functions)
- Demonstrate recursive functions.
- Demonstrate use of arrays (1-d arrays) and functions
- Demonstrate use of multidimensional array (2-d arrays) and functions
- Demonstrate use of pointers
- Demonstrate concept of strings (strings and pointers)
- Demonstrate array of strings.
- Demonstrate structures (using array and functions)
- Demonstrate nested structures

II Semester

Data Structures & Algorithms

Course objectives: Students will try to learn:

- Understand and remember algorithms and its analysis procedure.
- Introduce the concept of data structures through ADT including List, Stack, Queues.
- To design and implement various data structure algorithms.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structure algorithms.
- Compute the complexity of various algorithms.

Course outcome: Students will able to:

- Select appropriate data structures as applied to specified problem definition.
- Implement operations like searching, insertion, and deletion, traversing mechanism etc. on various data structures.
- Students will be able to implement Linear and Non-Linear data structures.
- Implement appropriate sorting/searching technique for given problem.
- Design advance data structure using Non-Linear data structure.

Data Structures Lab

Course objectives: Students will try to learn:

- Understand and remember algorithms and its analysis procedure.
- Introduce the concept of data structures through ADT including List, Stack, Queues .
- To design and implement various data structure algorithms.
- To introduce various techniques for representation of the data in the real world.
- To develop application using data structure algorithms.

Course outcome: Students will be able to:

- Select appropriate data structures as applied to specified problem definition.
- Implement operations like searching, insertion, and deletion, traversing mechanism etc. on various data structures.

- Students will be able to implement Linear and Non-Linear data structures.
- Implement appropriate sorting/searching technique for given problem.
- Design advance data structure using Non-Linear data structure.

Discrete Mathematics

Course objectives: Students will try to learn:

- Concepts of mathematical logic for analyzing propositions and proving theorems.
- Use sets for solving applied problems, and use the properties of set operations algebraically.
- Work with relations and investigate their properties.
- Investigate functions as relations and their properties.
- Introduce basic concepts of graphs, digraphs and trees.

Course outcome: Students will be able to:

- Analyze logical propositions via truth tables.
- Prove mathematical theorems using mathematical induction.
- Understand sets and perform operations and algebra on sets.
- Determine properties of relations identify equivalence and partial order relations, sketch relations.
- Identify functions and determine their properties.
- Define graphs, digraphs and trees, and identify their main properties.
- Evaluate combinations and permutations on sets.

Computer Organization

Course objectives: Students will try to learn:

- To understand the structure, function and characteristics of computer systems.
- To understand the design of the various functional units and components of computers.
- To identify the elements of modern instructions sets and their impact on processor design.
- To explain the function of each element of a memory hierarchy.
- To identify and compare different methods for computer I/O.

Course outcome: Students will be able to:

- Understand the theory and architecture of central processing unit.
- Analyze some of the design issues in terms of speed, technology, cost, performance.
- Design a simple CPU with applying the theory concepts.
- Use appropriate tools to design verify and test the CPU architecture.
- Learn the concepts of parallel processing, pipelining and inter-processor communication.
- Understand the architecture and functionality of central processing unit.
- Exemplify in a better way the I/O and memory organization.
- Define different number systems, binary addition and subtraction, 2's complement
- Representation and operations with this representation.

Accounting and Financial Management

Course objectives: Students will try to learn:

- An overview of the process in financial management of the firm
- The concept of accounting and financial management.
- The accounting standards, book keeping and preparation of journal, ledger and trial balance

and other accounting related statements.

- Improving students' understanding of the time value of money concept and the role of a financial manager in the current competitive business scenario.
- Will learn accounting through software.

Course outcome: Students will be able to:

- Understand basic concepts of Accounting.
- Record the transactions in bank reconciliation statement and record transactions through one journal.
- Understand the meaning of depreciation and need for charging depreciation, preparing the final accounts and company's financial statement as per the company's act.
- Knowledge regarding how to create ledgers, journals and balance sheet.

Accounting and Financial Management Lab

Course objectives: Students will try to learn:

- The concept of accounting and financial management.
- The accounting standards, book keeping and preparation of journal, ledger and trial balance and other accounting related statements.
- Will learn accounting through software.

Course outcome: Students will be able to:

- Understand basic concepts of Accounting.
- Knowledge regarding how to create ledgers, journals and balance sheet using Tally.
- Do Accounting through software Tally.

II Semester

Operating Systems

Course objectives: Students will try to learn:

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC.
- To understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS
- To study the need for special purpose operating system with the advent of new emerging technologies.

Course outcome: Students will be able to:

- Describe the important computer system resources and the role of operating system in their management policies and algorithms.
- Understand the process management policies and scheduling of processes by CPU
- Evaluate the requirement for process synchronization and coordination handled by operating system
- Describe and analyze the memory management and its allocation policies.
- Identify use and evaluate the storage management policies with respect to different

storage management technologies.

- Identify the need to create the special purpose operating system.

System Analysis and Design

Course objectives: Students will try to learn:

- What systems are and how they are developed.
- To Identify and describe the phases of the systems development life cycle.
- Follow the analysis portion of the Systems Development Life Cycle in a disciplined manner.
- Develop and evaluate system requirements.

Course outcome: On successful completion of the course students will be able to:

- A firm basis for understanding the life cycle of a systems development project;
- An understanding of the analysis and development techniques required as a team member of a medium-scale information systems development project;
- An understanding of the ways in which an analyst's interaction with system sponsors and users play a part in information systems development;
- Experience in developing information systems models;
- Experience in developing systems project documentation;
- An understanding of the object-oriented methods models as covered by the Unified Modeling Language.

Microprocessor

Course objectives: Students will try to learn:

- Learn about the architecture and programming of the microprocessor 8085 and 8086.
- Know the basic concepts of Motherboard and function of 8085 processor.

Course Outcome On successful completion of the course students will be able to:

- To illustrate the architecture of 8085 and 8086 microprocessors.
- To explain the programming and interfacing techniques of 8085 microprocessor.
- To analyze the basic concepts and programming of 8085
- To define the architecture of advanced microprocessors and microcontrollers.

Microprocessor Programming Lab

Course objectives: Students will try to learn:

- They come to know how to write program in Assembly level language and know how to implement the Programs in 8085 kit.
- Know the basic concepts 8085 program.
- Get hands on experience with Assembly Language Programming

Course outcome: Students will be able to:

- Apply the fundamentals of assembly level programming of microprocessors.
- Build a program on a microprocessor using arithmetic & logical instruction set of 8085.
- Develop the assembly level programming using 8085 Branching instruction set.
- Write programs based on Instruction set of 8085.

Object Oriented Programming with C++

Course objectives: Students will try to learn:

- To develop programming skills , using object oriented programming concepts,
- learn the concept of class and object using C++
- develop classes for simple applications

Course outcome: On successful completion of the course students will be able to:

- Identify importance of object oriented programming and difference between structured oriented and object oriented programming features.
- Able to make use of objects and classes for developing programs.
- Able to use various object oriented concepts to solve different problems.

Object Oriented Programming with C++ Lab

Course objectives: Students will try to learn:

- Develop solutions for a range of problems using objects and classes.
- Programs to demonstrate the implementation of constructors, destructors and operator overloading.
- Apply fundamental algorithmic problems including type casting, inheritance, and polymorphism.
- Understand generic programming, templates, file handling.

Course outcome: On successful completion of the course students will be able to:

- Programs using Control Structures
- Programs using Functions
- Programs using Arrays
- Programs using Inline Functions
- Programs using Classes
- Programs using Constructors and Destructors
- Programs using Friend Functions
- Programs using Operator Overloading
- Programs using Inheritance
- Programs using Virtual Functions
- Programs using Strings

III Semester Numerical Analysis and Statistics

Course objectives: Students will try to learn:

- To develop the mathematical skills of the students in the areas of numerical methods.
- To teach theory and applications of numerical methods in a large number of engineering subjects which require solutions of linear systems, interpolation
- To lay foundation of computational mathematics for post-graduate courses specialized studies and research.

Course outcome: On successful completion of the course students will be able to:

- Apply numerical methods to find our solution of algebraic equations using different methods under different conditions, and numerical solution of system of algebraic equations.
- Apply various interpolation methods and finite difference concepts
- Work out numerical differentiation and integration whenever and wherever routine methods are not applicable.

- Work numerically on the ordinary differential equations using different methods through the theory of finite differences.

Numerical Analysis and Statistics Lab

Course objectives: Students will try to learn:

- To provide suitable and effective methods called Numerical Methods, for obtaining approximate representative numerical results of the problems.
- To solve problems in the field of Applied Mathematics, Theoretical Physics and Engineering this requires computing of numerical results using certain raw data.
- To solve complex mathematical problems using only simple arithmetic operations. The approach involves formulation of mathematical models of physical situations that can be solved with arithmetic operations.
- To deal with various topics like finding roots of equations, solving systems of linear algebraic equations, interpolation and regression analysis, numerical integration & differentiation, solution of differential equation, boundary value problems, and solution of matrix problems.
- To facilitate numerical computing

Course outcome: On successful completion of the course students will be able to:

- Apply Numerical analysis which has enormous application in the field of Science and some fields of Engineering.
- Familiar with finite precision computation.
- Familiar with numerical solutions of nonlinear equations in a single variable.
- Familiar with numerical integration and differentiation, numerical solution of ordinary differential equations.
- Familiar with calculation and interpretation of errors in numerical method.

Database Management Systems

Course objectives: Students will try to learn:

- To describe a sound introduction to the discipline of database management systems.
- To give a good formal foundation on the relational model of data and usage of Relational Algebra.
- To introduce the concepts of basic SQL as a universal Database language
- To demonstrate the principles behind systematic database design approaches by covering conceptual design, logical design through normalization.

Course outcome: Students will be able to:

- Explain the features of database management systems and Relational database.
- Design conceptual models of a database using ER modeling for real life applications and also construct queries in Relational Algebra.
- Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
- Retrieve any type of information from a data base by formulating complex queries in SQL.
- Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
- Build indexing mechanisms for efficient retrieval of information from a database.

Database Management Systems and Visual Basic Lab

Course objectives: Students will try to learn:

- Formal foundation in database concepts, technology and practice to the participants to groom them into well-informed database application developers
- to give a good formal foundation on the relational model of data
- to present SQL and procedural interfaces to SQL comprehensively
- to give an introduction to systematic database design approaches covering conceptual design, logical design and an overview of physical design
- to motivate the participants to relate all these to one or more commercial product environments as they relate to the developer tasks
- to present the concepts and techniques relating to query processing

Course outcome: On successful completion of the course students will be able to:

- Understand, appreciate and effectively explain the underlying concepts of database technologies
- Design and implement a database schema for a given problem-domain
- Normalize a database
- Populate and query a database using SQL DML/DDI commands.
- Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS
- Programming PL/SQL including stored procedures, stored functions, cursors, packages.
- Design and build a GUI application using a 4GL

Computer Networks

Course objectives: Students will try to learn:

- Study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- Acquire knowledge of Application layer and Presentation layer paradigms and protocols.
- Study Session layer design issues, Transport layer services, and protocols.
- Gain core knowledge of Network layer routing protocols and IP addressing.
- Study data link layer concepts, design issues, and protocols.
- Read the fundamentals and basics of Physical layer, and will apply them in real time applications.

Course outcome: Students will able to:

- Describe the functions of each layer in OSI and TCP/IP model.
- Explain the functions of Application layer and Presentation layer paradigms and Protocols.
- Describe the Session layer design issues and Transport layer services.
- Classify the routing protocols and analyze how to assign the IP addresses for the given network.
- Describe the functions of data link layer and explain the protocols.
- Explain the types of transmission media with real time applications

Dot Net Programming

Course objectives: Students will try to learn:

- Microsoft framework architecture
- Development of console application
- Building windows application
- OOPs using C#.NET
- Learn data access mechanism provided .net
- Create and consume libraries
- Create a web application using .net
- Developing the website & application
- Application security
- Dot Net IDE Component Framework.
- Programming concepts in .Net Framework.

Course outcome: Students will able to:

- Create user interactive web pages using ASP.Net.
- Create simple data binding applications using ADO.Net connectivity.
- Performing Database operations for Windows Form and web applications.

III Semester

Software Engineering

Course objectives: Students will try to learn:

- Knowledge of basic SW engineering methods and practices, and their appropriate application.
- Describe software engineering layered technology and Process frame work.
- A general understanding of software process models such as the waterfall and evolutionary models.
- Understanding of software requirements and the SRS documents.
- Understanding of the role of project management including planning, scheduling, risk management, etc.
- Describe data models, object models, context models and behavioral models.
- Understanding of different software architectural styles.
- Understanding of software testing approaches such as unit testing and integration testing.
- Describe software measurement and software risks.
- Understanding on quality control and how to ensure good quality software.

Course outcome: Students will able to:

- Select and implement different software development process models.
- Extract and analyze software requirements specifications for different projects.
- Develop some basic level of software architecture/design.
- Apply standard coding practices.
- Define the basic concepts and importance of Software project management concepts like cost estimation, scheduling and reviewing the progress.
- Identify and implement of the software metrics.
- Apply different testing and debugging techniques and analyzing their effectiveness

Java Programming and Web Designing

Course objectives: Students will try to learn:

- To understand how to design, implement, test, debug, and document programs that use
- Basic data types and computation, simple I/O, conditional and control structures, string handling and functions.
- To understand the importance of Classes & objects along with constructors, Arrays and Vectors.
- Discuss the principles of inheritance, interface and packages and demonstrate through problem analysis assignments how they relate to the design of methods, abstract classes and interfaces and packages.
- To understand importance of Multi-threading & different exception handling mechanisms.
- To learn experience of designing, implementing, testing, and debugging graphical user interfaces in Java using applet and AWT that respond to different user events.

Course outcome: Students will be able to:

- Implement Object Oriented programming concept using basic syntaxes of control
- Structures, strings and function for developing skills of logic building activity.
- Identify classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem
- Demonstrates how to achieve reusability using inheritance, interfaces and packages and
- Describes faster application development can be achieved.
- Demonstrate understanding and use of different exception handling mechanisms and
- Concept of multithreading for robust faster and efficient application development.
- Identify and describe common abstract user interface components to design GUI in Java using Applet & AWT along with response to events.

Web Designing Lab

Course objectives: Students will try to learn:

- Gain knowledge about basic Java language syntax and semantics to write Java programs and use concepts such as variables, conditional and iterative execution methods etc.
- Understand the fundamentals of object-oriented programming in Java, including defining classes, objects, invoking methods etc and exception handling mechanisms.
- Understand the principles of inheritance, packages and interfaces.

Course outcome: Students will able to:

- Identify classes, objects, members of a class and relationships among them needed for a specific problem.
- Write Java application programs using OOP principles and proper program structuring
- Demonstrate the concepts of polymorphism and inheritance
- Write Java programs to implement error handling techniques using exception handling.

Data Mining and Data Warehousing

Course objectives: Students will try to learn:

- To introduce the concept of data Mining as an important tool for enterprise data management and as a cutting edge technology for building competitive advantage.
- To enable students to effectively identify sources of data and process it for data mining
- To make students well versed in all data mining algorithms, methods of evaluation.
- To impart knowledge of tools used for data mining

Course outcome: Students will able to:

- Know the fundamentals of data mining
- Pre-process the data
- Organize and prepare the data needed for data mining using pre pre-processing techniques
- Understand frequent pattern mining
- Perform exploratory analysis of the data to be used for mining.
- Implement the appropriate data mining methods like classification, clustering or Frequent
- Classify the dataset using supervised learning methods 5. Cluster the dataset using unsupervised learning methods

Software Testing and Quality Assurance

Course objectives: Students will try to learn:

- Basic software debugging methods.
- White box testing methods and techniques.
- Black Box testing methods and techniques.
- Designing test plans.
- Different testing tools (familiar with open source tools)
- Quality Assurance models.

Course outcome: Students will able to:

- Investigate the reason for bugs and analyze the principles in software testing to prevent and remove bugs.
- Implement various test processes for quality improvement
- Design test planning.
- Manage the test process
- Apply the software testing techniques in commercial environment
- Use practical knowledge of a variety of ways to test software and an understanding of some of the tradeoffs between testing techniques.

III Semester

PROJECT

Course objectives: Students will try to learn:

- To offer students a glimpse into real world problems and challenges that need IT based solutions
- To enable students to create very precise specifications of the IT solution to be designed.
- To introduce students to the vast array of literature available of the various research challenges in the field of IT
- To create awareness among the students of the characteristics of several domain areas where IT can be effectively used.
- To enable students to use all concepts of IT in creating a solution for a problem
- To improve the team building, communication and management skills of the students.

Course outcome: Students will be able to:

- Discover potential research areas in the field of IT
- Conduct a survey of several available literature in the preferred field of study
- Compare and contrast the several existing solutions for research challenge
- Demonstrate an ability to work in teams and manage the conduct of the research study.
- Formulate and propose a plan for creating a solution for the research plan identified
- To report and present the findings of the study conducted in the preferred domain

3	B.B.A	BBABCSYCM	One - Business Administration BBACBCSMANYCM Electives : 2. Marketing Management 3. Human Resource Management 4. Financial management
----------	--------------	------------------	---

PROGRAM SPECIFIC OBJECTIVESS AND OUTCOME

Elective: Marketing Management: Program specific objectives:

- To help students to understand the concepts of marketing and its 4 P's. How the 4 P's: product, price, place and promotion decisions affect the success of any business
- To help students to understand the working of rural marketing institutions and to familiarize with the special problems related to sales in rural markets, consumer behavior and consumer satisfaction in rural region
- The purpose of this program is to expose the students different issues concerned with Advertising and Sales

- Provides understanding the management of retail business and supply chain. Provides an insight into customer relationship management and effective retail space management
- Students learn the tools and techniques necessary to effectively manage the sales function of an organization

Elective: Marketing Management: Program specific outcomes:

- Student learns the nature, scope and importance of marketing.
- It helps to understand basic concepts of marketing.
- It develops the basic and essential skills of students related to marketing.
- It improves the ability of the students and creates employability opportunities in marketing which are essential for industries.
- Students get insights into all functional areas of retailing.
- The students also get an insight on consumer behavior and social responsibility of marketing towards business.
- Students will able to Categorize issues in rural markets and Analyze marketing environment, consumer behavior, distribution channels, marketing strategies, etc
- Students will be able to describe different types of advertisement, discuss the ethics in advertisement
- Students will be able to implement the key issues in supply chain management effectively.

Elective: Human Resource Management: Program specific objectives:

- The objectives of this course is to acquaint the students with the basics of Human Resource management, its scope and functions
- To understand theoretical foundations of key areas of HRD, importance of HRD, its scope and how it helps in improving the Quality of Work Life of employees in an organization.
- They also get an insight into what if training, development, career development, employee empowerment and related concepts.
- The course helps in understanding performance management techniques, various motivation theories and importance of job evaluation in assessing the relative worth of the job.
- The course helps to give insight with regard to wage and salary administration, various incentive plans, benefits and services, discipline and Industrial relations for a strong & effective workforce through right policies & practices
- Students are exposed to Recruitment and Selection Process though Practice work.
- Students get to understand important legal provisions governing the industrial

Elective: Human Resource Management: Program specific outcomes:

- Students apply motivational theories in their life.
- Students understand the employee contributions and participations in solving any industrial disputes.
- Students will be able to understand the importance of human resources and their effective management in organizations.
- They get an insight into what are human resource planning, job analysis and design, recruitment sources and selection methods, different tests used in selection and the process of interview.
- Enables students to develop integrated view on role of HRD in modern business.
- They develop insight into various HRD programs, to help keep employees empowered.
- They understand the importance of Workers participation in Management, in the form of works committees, Joint Management Councils, worker directors, Co-partnership.
- The students would be able to understand how employees can be managed effectively using motivation techniques.
- They would be able to design jobs and carryout job evaluations
- Helps in Designing and Executing effective Incentive programs and employee management techniques. Students will be able to analyze core and legal issues, policies and practices surrounding employee relations, and the strength of trade union movement in India.

Elective: Financial management: Program Specific Objectives:

- To acquaint the students with the fundamental aspects of financial management in the business.
- To acquaint the students with the fundamental aspects and the importance of Working Capital Management in business.
- To expose the students with an overview of banks and other financial services companies.
- To acquaint the students with the basics of security Analysis and portfolio management
- Students got knowledge about the interpretation and analysis of financial statements effectively
- Students able to understand long-term and short term financing
- To make Students read and studied about dividend policies
- Students are acquainted with current financial practices
- Students are well acquainted with Financial Markets

Elective: Financial management: Program Specific Outcomes:

- Empowers the students with knowledge of financial planning, procurement, investment and distribution of finance in companies.
- Students will learn about the capital structures which is most appropriate for the company and they will be able to calculate cost of various sources of capital.
- They also get an insight into meaning, importance of Capital Budgeting and also learn its techniques.
- Students will be able to determine working capital requirement, optimum inventory level. Enables them to prepare cash budget and estimate the various kinds of leverages.
- Students will be able to evaluate credit policies of the company.
- Students learn about financial services in India as Indian Financial System, Financial Markets, Banking and Insurance Sector in India and Recent Trends in Accounting and Finance.
- Students are acquainted with current financial practices and also acquainted with Financial Markets knowledge.
- Students will be able to; explore different avenues of investment, equipped with the knowledge of security analysis, apply the concept if portfolio management for better investment.
- Students will have the knowledge of analysing market efficiency

Department of BBA

Sl. No.	Code	Title of the Paper
1 Semester		
1.	1.01	Functional Language – I Communicative English
2.	1.02	Functional Language – II – Kannada or other languages.
		Core Papers
3.	1.03	Financial Accounting – I
4.	1.04	Business Organization and Environment
5.	1.05	Banking Theory and Practice
6.	1.06	Indian Constitution
II Semester		

7.	2.01	Functional Language – I Business Communication
8.	2.02	Functional Language – II – Kannada or other languages.
		Core Papers
9.	2.03	Financial Accounting – II
10.	2.04	Business Management
11.	2.05	Cost Accounting – I
12.	2.06	Environmental Studies.

Sl. No.	Code	Title of the Paper
III Semester		
13.	3.01	Functional Language – I Business Communication
14.	3.02	Functional Language – II – Kannada or other languages.
		Core Papers
15.	3.03	Human Resource Management
16.	3.04	Corporate Accounting-I
17.	3.05	Cost Accounting – II
18.	3.06	Computer Fundamentals and applications
IV Semester		
19.	4.01	Functional Language – I Business Communication
20.	4.02	Functional Language – II – Kannada or other languages.
		Core Papers
21.	4.03	Business Legislation
22.	4.04	Corporate Accounting-II
23.	4.05	Business Statistics
24.	4.06	Managerial Economics

V Semester		
25.	5.01	Financial Management – I
26.	5.02	Management Accounting
27.	5.03	Office Administration and Mgt.
28.	5.04	Quantitative Technique
29.	5.05	Taxation – I
30.	5.06	Elective – I-HRM
	5.06	Elective – I-FM
	5.06	Elective – I-MM
VI Semester		
31.	6.01	Financial Management – II
32.	6.02	Principles and Practice of Auditing
33.	6.03	Marketing Management
34.	6.04	Taxation – II
35.	6.05	Elective – II-HRM
	6.05	Elective – II-FM
	6.05	Elective –II-MM
36.	6.06	Entrepreneurship Development

I Semester Communicative English

Course objectives: To acquaint the students with English Grammar and Composition and to make them learn Correspondence. Also help them learn proper pronunciation of English words.

Course outcome: Students proficiency level will be enhanced by adopting advance communicative learning, they will be able to prepare for corporate environment and maintain public relation in a more efficient manner.

Financial Accounting I

Course objectives: To provide fundamental accounting knowledge and familiarize basic accounting concepts.
